FOREWORD

The 2021 Livestock Census of Bhutan report presents the results of the first livestock census conducted by the National Statistics Bureau. It contains basic statistics of livestock population and production.

The main objective of the 2021 Livestock Census of Bhutan was to collect basic information of livestock holders including both the household and institutional holders. The statistics in the report includes the number of livestock holders, number of livestock population by type, livestock production by type and geographical distribution of the livestock holdings in the country. Such livestock data are essential for economic development planning purposes and to provide a framework for future follow-up studies.

The census was enumerated in Covid-19 low-risk *dzongkhags* by 189 university graduate students, supervised by the *gewog* and *dzongkhag* livestock officials; *gewog* livestock extension officials in high-risk

dzongkhags, such as Samtse, Sarpang, Samdrup Jongkhar, as well as in a few high-risk *gewogs* in low-risk *dzongkhags*. Enumeration took place from November 6 to December 15, 2021.

I hope that the information collected, processed, and reported in this report provides opportunities for stronger evidence-based policy formulation. I extend my heartfelt appreciation to the staff of the NSB and all others, including the respondents, for their support and cooperation in the successful conduct of the census. Thank you also to FAO for providing a final review of the report.

Chhime Tshering
(DIRECTOR)
National Statistics Bureau

ACKNOWLEDGEMENTS

The National Statistics Bureau (NSB) successfully conducted the first livestock census from November 6, 2021 to December 15, 2021 with the financial support of the Royal Government of Bhutan (RGoB).

The quality of livestock data depends on the data collection system adopted and the support received from various stake holders, including respondents. For the preparation and administration of this census, the NSB collaborated with many agencies of the government. We would like to thank and extend our appreciation for the support and cooperation rendered for the census by many government agencies and our farming population. These agencies included the Department of Livestock, the Ministry of Agriculture and Forests;

dzongkhag and *gewog* livestock extension officials (GLEOs) and the government livestock input farms.

NSB would like to convey its gratitude to the livestock census team from the National Statistics Bureau, the field supervisors, enumerators, dashboard managers, RNR statistics technical working group (RS-TWG) members and all the livestock holders in the country for their support and co-operation. Thanks also to the Food and Agriculture Organization of the UN for their support in editing this report.

WB	World bank

Livestock Holders

The 2021 Livestock Census of Bhutan (2021 LC) enumerated a total of 54,149 holders, of which, 97.0 percent are permanent holders (about 52,501 households), 2.7 percent were temporary holders (1,473 households) and 0.3 percent were institutional (non-household) holders (175 holders).

The top three locations of permanent holders were Samtse (14.2 percent), Trashigang (9.6 percent) and Monggar (8.6 percent), while the top three locations for temporary holders were Sarpang (13 percent), Punakha (12 percent) and Wangdue Phodrang (11.1 percent). Three *dzongkhags*- Paro (10.9 percent), Sarpang (10.3 percent) and Haa (9.7 percent)- accounted for the highest number of institutional holding in the country.

Livestock Population

The top three livestock types raised by holders included Jersey cross cattle (30 thousand holders), followed by poultry (22 thousand holders) and Nublang-Thrable cattle (20 thousand holders). Across *dzongkhags*, Trashigang (10 percent), Monggar (9.6 percent) and Sarpang (8.8 percent) had the highest

jersey cross holders compared to other *dzongkhags*. As for poultry, Samtse (24.5 percent), Dagana (10.9 percent), and Chhukha (10.5 percent) *dzongkhags* had more poultry holders than other *dzongkhags*.

A total of 295,444 cattle were recorded in 2021, an increase of 5 percent from 2020, though overall the cattle population has been declining since 2006.

The improved milch population, such as Jersey and Brown Swiss cattle, increased in recent years, while the milch population of local breeds decreased. This seems to indicate that preference for improved livestock breeds increased among small-scale livestock holders in the country.

There were about 116,134 Jersey cows in the country in 2021, of which, roughly 94.0 percent were Jersey cross. Across *dzongkhags*, Sarpang (9.8 percent), Trashigang (8.5 percent) and Monggar (8.4 percent) accounted for the highest number of Jersey cross.

The census recorded about 1,007 Holsten Friesian in 2021. Chhukha (21.6 percent), Trashigang (17.8 percent) and Samtse (16.6 percent) had the highest number of Holsten Friesian. There

were 330 milch Holsten Friesian in the country.

Other livestock population have seen inconsistent growth over the past few decades. For example, the pig population has dropped between 1997 and 2014 and then grew in recent years. Other livestock population, such as yak, equine and sheep dwindled in recent years.

Livestock Birth

The 2021 LC collected information on the number of calves aged less than 1 year, by type. A total of 25,682 calves were recorded for improved livestock and 31,029 calves for other livestock. Nublang-Thrabum (41.0 percent) and Yangku-Yangkum (about 10.9 percent) accounted for the highest number of calves in 2021.

From the total of 5,682 calves for improved livestock, 11.7 percent were reared in Sarpang, 9.4 percent in Samtse and 8.6 percent in Monggar. New born Jersey cross accounted for about 90 percent of total calves born to improved livestock breeds, of which about 55 percent were female.

In terms of calves aged less than 1 year for other bovine livestock, Samtse (14.1 percent), Trashigang (12.1 percent) and Wangdue Phodrang (9.5 percent) were the top three *dzongkhags* for calves born in 2021.

Livestock Lost

The census also gathered information on the number of exits of animals through losses during the reference year. About 7,488 animals were reported lost in 2021, of which, 71.8 percent (5,377 birds) were poultry and 22.5 percent (1,686 cows) were cattle. Wangdue Phodrang (293 cows) and Punakha (175 cows) *dzongkhags* reported the highest loss of cattle in 2021. The loss reported by holders includes only those animals that died or were stolen by someone and for which the holder does not know the where-abouts of the animal.

Livestock Death

A total of 19,790 bovine livestock deaths were reported in 2021, of which Wangdue Phodrang (14.5 percent), Trashi Yangtse (11.7 percent) and Monggar (9.1 percent) reported the highest deaths among the *dzongkhags*. About 17,360 cattle deaths were reported, which is about 88 percent of total bovine deaths.

The census reveals that the majority of other livestock deaths were in the poultry category with 891,326 birds dead. Of the total poultry death, five *dzongkhags* reported the highest deaths in the country: Sarpang (26.4 percent), Samtse (23.1 percent), Tsirang (14.3 percent), Chhukha (12.9 percent) and Dagana (12.7 percent).

Dairy Production

The country recorded about 54,654 metric tons (MT) of milk produced in 2021 (down 6 percent from 2020); 1,930 MT (down 8 percent) of butter; 3,154 MT (down 25 percent) of cheese; and 198 MT (up 11 percent) of chugo compared to 2020.

According to the census, Trashigang (6,820 MT), Samtse (4,829 MT) and Wangdue Phodrang (4,559) recorded the highest milk production in the country. The share of total milk production ranged from 1 percent in Gasa to 12.5 percent in Trashigang. Samtse and Wangdue Phodrang accounted for 8.9 percent and 8.4 percent, respectively. The highest national share of butter and cheese production in 2021 were recorded in Trashigang (butter, 17.5 percent; cheese, 19.2 percent), Wangdue Phodrang (butter, 10.4 percent; cheese, 8.9 percent) and Sarpang (butter, 7.4 percent; cheese, 7.6 percent).

Meat Production

Meat production increased in 2021 compared to 2020 in all categories except for pork and chevon production. Pork production decreased by almost 18 percent since the previous year, totaling about 700 MT in 2021. Chevon production showed the largest decrease of more than 30 percent and stood at almost 184 MT in 2021.

Across *dzongkhags*, Monggar, Lhuentse and Trashigang accounted for the highest production of beef, at 15.3 percent, 10.3 percent and 11.8 percent, respectively. For pork production, Sarpang, Tsirang and Samtse accounted for the highest shares, at 33.4 percent, 21.6 percent and 14.7 percent, respectively.

Chicken production saw a small increase of 3 percent from 1,819 MT in 2020 to 1,866 MT in 2021. Sarpang (28.1 percent), Samtse (27.8 percent) and Dagana (13.6 percent) accounted for the highest production of chicken.

Fish Population and Production

The census recorded about 750 fish ponds in 2021 covering 288,445 square metres of land. The majority of fish farmers resided in Tsirang (31.6 percent), Dagana (18.2 percent), Samtse (15.7 percent) and Sarpang (15.0 percent) *dzongkhag*. The number of fish reported by holders were based on the number of fingerlings put in the ponds. The stock estimated by holders may be underreported due to the inability to measure increase in stock due to breeding.

Total fish production was 193 MT in 2021, an increase of 18 percent from 2020. Three *dzongkhags* made up more than 92 percent of the total fish production in the country:—Sarpang, Dagana and Tsirang.

Egg Production

Egg production demonstrated an upward trend in recent years prior to 2021. In 2021, total egg production was recorded at a little more than 133 million eggs, a decrease of 21 percent compared to 2020. Across *dzongkhags*, Sarpang accounted for the highest production of eggs, at 29.1 percent, followed by Tsirang at 20.3 percent and Samtse at 6.9 percent. The number of improved poultry layers range from 1k in Gasa to 182k in Sarpang.

Honey Production

The census revealed that there were 7,097 bee holders in the country as of the census reference date. The distribution of bee holders was highly concentrated in the *dzongkhags* of Samtse (32.9 percent), Sarpang (18.2 percent), Dagana (16.0 percent) and Tsirang (15.1 percent).

A total of 21,933 beehives were recorded in 2021, of which, 79 percent

were local and the remaining 21 percent were improved beehives. About 43 MT of honey were produced in 2021, a decrease of 2 percent from the previous year. Sarpang (30.2 percent), Bumthang (23.6 percent), Samtse (18.6 percent) and Tsirang (7.4 percent) recorded the highest honey production in the country.

Wool Production

About 5.8 MT of wool was produced in the country in 2021, which is a drop of 5 percent compared to the previous year. About 85 percent of total wool production were from sheep and the remaining 15 percent were from Yak. In terms of the production share, Samtse (47.9 percent), Trashigang (34.9 percent) and Wangdue Phodrang (7.3 percent) accounted for the highest production of wool in the country. The high production of wool in these *dzongkhags* were driven by their high number of sheep.

Chapter 1

INTRODUCTION

1.1 Background

Livestock production is the significant and growing source of income and growth in many developing worlds. Approximately livestock sector contributed 0.16 percentage points to the overall GDP growth in 2020. The rural households partially or fully depend on livestock for their livelihoods. The livestock rearing provides them with a wide spectrum of benefits, such as cash income from the sale of dairy and livestock products, food, manure and power to plough their fields in many rural parts of Bhutan.

Reliable livestock statistics are important to help develop and implement food security programs, promote and monitor economic growth and poverty reduction policies, and develop sound investment strategies for the livestock sector.

Earlier livestock censuses were conducted by the Department of Livestock (DoL) and the RNR Statistics Division (RSD) of the Ministry of Agriculture and Forests. RSD and its mandate to carry out RNR censuses and surveys were formally transferred to NSB in September 2021 by the government, upon which NSB

established its Agricultural Statistics Division (ASD).

1.2 Census date and reference period

The 2021 LC was conducted from November 6 to December 15, 2021. The reference date for census enumeration was 15 December, 2021, with January to December 2021 as the reference year. This means that the 2021 LC provides population data as of 15th December, 2021 and production data for 2021.

1.3 Objectives of the census

The main objective of the census was to assess the characteristics and performance of Bhutanese livestock farming. The census also had the following specific objectives:

1. Record and maintain reliable information on Bhutan's livestock population and production for development and implementation of food security programs.
2. Establish reliable information on Bhutan's livestock population and production for planning and monitoring of livestock development programs.

3. Collect information on livestock indicators, such as annual livestock population, by characteristics such as breed and production, for development, promotion and monitoring of economic growth.
4. Provide time series data on the livestock population and production for development of livestock-sector investment strategies.

1.4 Scope and coverage

Livestock census is a complete enumeration of livestock holdings at a point in time with respect to well-defined characteristics.

The LC 2021 is based on complete enumeration of livestock holdings, covering the following types of holding:

- *Permanent holders:* holders in the household sector who permanently reside in the village and rear livestock. For example, regular households in the village.
- *Temporary holders:* holders in the household sector who temporarily reside in the village, or are transient holdings rearing livestock, such as DANTAK workers, households residing in PWD Camps, school teachers rearing livestock, etc.
- *Institutional holders:* Institutional holders included all non-household or commercial holdings, such as functional cooperatives/farmers' groups, Dratshang, livestock holding for general schools,

colleges or for any general/common purposes, etc.

- *Government farms:* This included state-owned enterprises, such as livestock farms established by the Government to support the development of the livestock sector by the Department of Livestock (DoL), Ministry of Agriculture and Forests. The following list of government input farms were captured:

- Bhutan Livestock Development Corporation Limited (BLDC)
- Regional Poultry and Piggery Breeding Centre, Monggar
- National Research & Development Centre for Aquaculture, Sarpang
- National Nublang Breeding Centre, Trashigang

1.5 Structure of the report

The livestock census report presented here contains four chapters. The introductory chapter provides the general context of conducting the livestock census, including the objectives of the census and its scope and coverage.

Chapter two describes the methodological and operational procedures implemented in the census, to offer readers and census users a better understanding of how the census results have been obtained and how they should be interpreted. The chapter also describes: stakeholder participation; the design of the questionnaire; data collection and capture; pre-census listing operations; training of enumerators and supervisors; census enumeration; data processing, including data compilation,

consolidation, validation and editing;—and tabulation, analysis, followed by report writing.

Chapters three and four cover the subject matter of the census. Chapter three, describes the different types of livestock population including the herd structure and its dynamics. It also presents the count of animals, by type, on census date, and the number of animals that exited the population through death or other losses during the reference year. Additional information on calves aged less than 1 year are provided to keep track of newborn cattle during the 2021 reference year.

Chapter four presents data on the production of livestock product such as dairy products, meat, eggs, honey and wool. This chapter also includes information on apiculture and aquaculture, such as the numbers of bee farmers, types of beehives, and the number of fish farmers disaggregated by type of fish and size of fish pond. It is worth noting that apiculture, or bee farming, has grown in recent years in Bhutan.

The report concludes with annexes that provide more detailed statistical tables as well as the census questionnaires.

Chapter 2

CENSUS METHOD AND OPERATIONS

2.1 Census preparation

Like any census and survey, the 2021 Livestock Census of Bhutan (2021 LC) followed standard census methodologies and operations to assure quality data.

The initial preparation of the livestock census included drafting a budget proposal in early August 2021. The proposal was submitted to the Prime Minister's Office-PMO to seek funding. Following an assessment of the proposal, it was endorsed by PMO in September, 2021.

Pre-census activities started from early October 2021 and the main census was conducted from 6th November to 15th December 2021, with financial support from the Royal Government of Bhutan (RGoB) and technical support from the renewable natural resources (RNR) statistical technical working group (RS-TWG). The RS-TWG included officials from the Department of Agriculture (DoA), the Department of Livestock (DoL), the Department of Agricultural Marketing and Cooperatives (DAMC), Policy and Planning Division, the Bhutan Agriculture and Food Regulatory Authority (BAFRA) of the

Ministry of Agriculture and Forests (MoAF), and the National Statistics Bureau.

2.1.1 Stakeholder participation

To ensure proper coordination and planning, the NSB, with support of the RS-TWG, convened several rounds of workshops to finalize the questionnaire and census operational plan. Two major stakeholder workshops were conducted at various stages of the census preparatory phase. To seek the support and cooperation of MoAF and agree on census administration and implementation strategies, as well as on the information to be produced by the census, the census operational plan, presented in Figure 2.01, was adopted in view of the current COVID-19 pandemic.

For low-risk *dzongkhags*, the livestock sector in the respective *dzongkhags* supported the NSB with recruitment of university graduates as temporary enumerators for field data collection. The sector also procured transportation for the census field operations, in close collaboration with respective

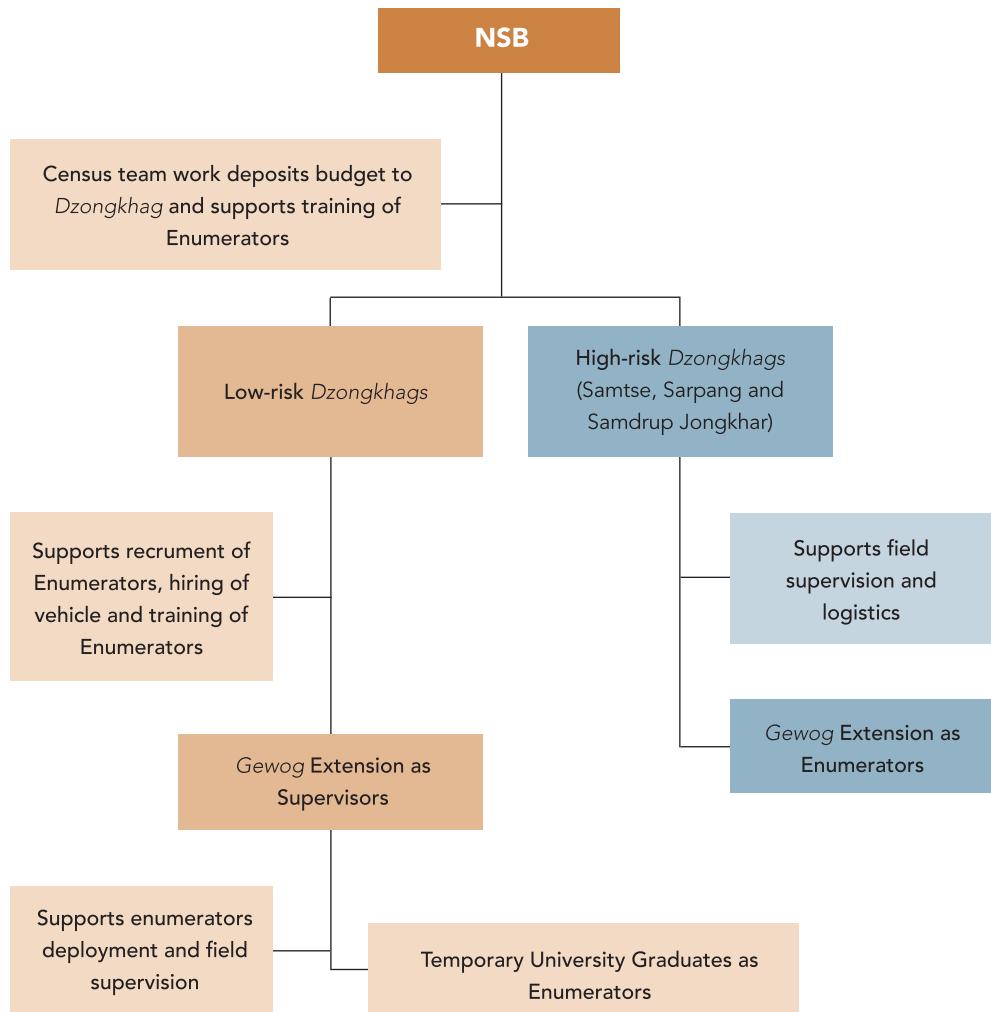

Figure 2.01 Census operational plan

District Statistical Officers (DSOs). Gewog Livestock Extension Officials supported field census supervision and other logistical arrangements for enumerators, such as identification of livestock households, deployment of enumerators, and enumerator lodging and daily allowances.

For high-risk dzongkhags, similar

arrangement could not be adopted due to COVID-19 related travel restrictions. Furthermore, the recruitment of graduates as temporary enumerators and the provision of training of enumerators by the NSB was found to be challenging. Gewog Livestock Extension Officials in high-risk dzongkhags were provided virtual

training on the installation of software to enable computer assisted personal interviewing (CAPI), how to use the digitized questionnaire, and procedures for implementing data collection in the field. Officials from the *dzongkhag* livestock sector supervised the field data collection.

2.1.2 Questionnaire design

The 2021 LC was conducted by NSB for the first time, with the census questionnaire thoroughly reviewed by members of the RS-TWG. Previous livestock censuses were conducted by the Ministry of Agriculture and Forests. Two versions of the questionnaire were drafted based on recommendations and feedback from stakeholder workshops. The questionnaire version A (available in the Annex) was developed to collect data from households and non-household respondents. Version B was developed to collect information from government livestock farms. The main census questionnaire for households and non-household sectors (see Annex), contained the following modules:

- **Module 1. Identification.** This module had basic information about the name and location of the livestock holders, as well as information about the type of holding collected during the frame listing.
- **Module 2. Livestock bovine population.** This module collected information about the type of bovine livestock, including head

counts, breed type, deaths and livestock lost during the reference year.

- **Module 3. Other livestock population.** This module focused on livestock population other than bovine, and the number by breed, and the number of deaths.
- **Module 4. Aquaculture.** This module collected information about the number of fish ponds, area covered and type of fish that the holder raised.
- **Module 5. Apiculture.** This module was about the rearing of bees, by beehive type, and about honey production.
- **Module 6. Livestock production.** The module focused on livestock products including dairy, meat and other products such as eggs, honey and wool.
- **Module 7. Breeding and fodder.** The module assessed the number of artificial insemination (AI) services availed by livestock holders, and the progeny born from previous AI services. It also included information on the area under improved pastures and winter fodder.
- **Module 8. Biogas.** This module collected information on biogas, sizes of biogas and its functionality.
- **Module 9. Migration.** The last module focused on livestock migration, type of migration type and destination.

The final census questionnaire was

agreed and finalized for implementation using computer assisted personal interviewing (CAPI). Following the finalization of the questionnaires, field instructions were developed to guide the enumerators and were incorporated in the CAPI, or digitized, questionnaire. The CAPI questionnaire was tested several times in census pilot and revised based on the evaluation of the pilot.

2.1.3 Data capture methodology

The World Bank's (WB) Survey Solutions was used to digitize the questionnaire and enter and capture data from respondents. Survey Solutions is a free software package developed by the WB to assist governments, national statistics offices, and NGOs in implementing advanced surveys using mobile devices. The software and digitized questionnaires were loaded into tablets to guide the enumerators through the questionnaire and data collection. This method of digitized data collection and capture is called Computer Assisted Personal Interviewing (CAPI).

A number of consistency and data validation checks were incorporated in the digitized data collection, such as automatic skip patterns. Automatic skip patterns ensure that when specific questions need to be skipped - depending on answers to previous questions - the program automatically guides the enumerator to the next question.

The large number of validation checks incorporated into the digitized questionnaire also helped improve data

quality, by limiting or avoiding errors in data entry or incorrect answers. Furthermore, specific instructions were provided for each question to help enumerators and respondents in dealing with that question. After the data collection was completed, the data were exported from survey solutions to STATA for analysis.

2.1.4 Listing of permanent livestock holders

The listing was conducted in August 2021 with support from the Department of Livestock, Ministry of Agriculture and Forests. Gewog Livestock Extension Officials from 205 gewogs updated the list of livestock households residing in their respective gewogs, and the updated list, was shared to NSB. The updated list frame received from Gewog Livestock Extension Officials were checked and corrected for inconsistencies to enable enumerators to locate households during the census.

2.2 Enumeration phase

2.2.1 Conduct of pilot census

A pilot census was conducted to check the structure and flow of the questionnaire and to estimate the average time required to enumerate a household. A pilot is important to test the procedures related to enumeration and to improve supervisor training and data processing.

Officials from the Agricultural Statistics Division (ASD) of the NSB conducted the

Table 2.01 Enumerators recruited by dzongkhag and date of training conducted, 2021

Dzongkhag	Graduate Enumerators	Date of Training	Group	Remarks (Number)
Monggar	24	1-3 November 2021	Group-1	
Trashi Yangtse	8	5-7 November 2021	Group-1

Bhutan	189			5 Groups

in-house pilot census over a period of two weeks. The findings from the pilot census were used to make necessary corrections and improve the structure and flow of the census questionnaire. The pilot also helped to plan field operations and establish the number of supervisors and enumerators to be recruited to complete field enumeration in the allocated time.

2.2 Recruitment and training of census staff

For the main census, 167 gewog supervisors and 189 university graduates were deployed as enumerators (see Table 2.01) in low

risk areas. Based on the pilot census, an enumerator was estimated to complete data collection for, or enumerate, 6 households per day. The number of enumerators required in dzongkhags were estimated based on the sample household list and estimated enumerations per day.

Gewog Livestock Extension Officials were identified as the supervisors, and a pool of university graduates were selected as temporary enumerators from respective dzongkhags. A total of 8 NSB officials were selected as Master Trainers for the Training of Enumerators (ToE) and 9 NSB

officials assigned as Dashboard Managers. The recruitments of enumerators were conducted by officials in the respective *dzongkhag* livestock sector in close collaboration with the District Statistical Officers (DSOs).

The trainings for enumerators were conducted for three days for each *dzongkhag*, from 1st to 17th November, 2021. During the training, enumerators were introduced to the general background of the census and the concepts and definitions of the terms contained in the questionnaire. They were also trained in the various enumeration procedures and in recording responses to the questionnaire electronically in their android device. During the training sessions, mock interviews in different dialects were conducted to equip enumerators with interviewing techniques.

2.2.3 Enumeration

The main census was conducted from 6th November to 15th December 2021. This was a little more than a month to allow for follow-ups on household responses and revisits.

For low-risk *dzongkhags*, the Gewog Livestock Extension Officials supervised the field enumeration by developing the enumerators' deployment plan. The enumerators assigned to specific *gewog* executed the field enumeration.

Furthermore, Dzongkhag Livestock Officials (DLOs/ADLOs) supervised their respective Gewog Livestock Extension

Officials and enumerators to complete the census on time. Apart from the Gewog/Dzongkhag supervisors supervising the fieldwork of the enumerators, there were 9 dashboard managers at NSB headquarters (HQ), who assigned questionnaires to the field teams and checked the quality of the results. The dashboard managers were also tasked to validate the data received from the field.

2.3 Data processing phase

2.3.1 Data compilation and consolidation

After the data were collected from the field, they were compiled and stored in two different data sets. For version A of the questionnaire, the data collected from the household and non-household sectors were extracted from Survey Solutions. For version B, data from the government livestock input farms were maintained separately. Both raw data sets were then exported in STATA format and stored for further cleaning and data validation.

2.3.2 Data checking and editing

During data collection, the dashboard managers helped assign questionnaires to enumerators in the field, and verified the quality and consistency of each completed questionnaire.

The respective *dzongkhag* dashboard manager assigned questionnaires and reviewed and validated the submitted questionnaires. Missing, incomplete, and inconsistent responses were also verified,

and the associated questionnaire was rejected as soon as it was received from an enumerator. Enumerators verified a rejected questionnaire, corrected errors and missing data by calling the associated household, and re-submitted the questionnaire after correction. This iteration process was repeated several times, if required, until the data were corrected. The data were then verified in two additional stages, first by the dashboard managers and then at the NSB HQ.

After the data collection was completed, the consolidated dataset was thoroughly checked to identify any remaining missing values, errors, and inconsistencies. In many cases, data issues were followed up through telephone calls with the households involved to resolve the problems. The final dataset was then made ready for analysis after several rounds of cleaning and validation.

2.4 Analysis and report writing

A tabulation plan and report outline were developed during the census preparation phase. A core set of basic tables was produced in accordance with the tabulation plan. This was used as the basis for the presentation and analysis of results in the census report.

The 2021 LC report writing team was formed internally to draft the respective sections and chapters of the report. The analysis results and report chapters underwent several rounds of internal review.

2.5 Census data quality assurance

The quality of data is of primary importance for accuracy, relevance, reliability and validity of results. The census team implemented measures to support good practices in data collection and to minimize errors in the data collection.

Data quality was enhanced through a variety of measures, from careful attention and stakeholder participation in questionnaire design, to fine tuning the questionnaire, to ensuring the content obtained the most relevant information for key users, such as the Department of Livestock, Ministry of Agriculture and Forests. In data collection, enumerators played an important role in obtaining accurate and quality information from respondents. Thus, training of enumerators (ToE) was conducted for 3-days to provide a thorough understanding of the concepts, definitions, logical reasons for and objectives of the questions to be asked of respondents.

Furthermore, the census team from NSB validated the data collected by supervising enumerators during the CAPI data collection and at the field enumeration level. Some of the validation and consistency checks put in the CAPI-questionnaire also helped to identify or prevent errors in responses and data entries, which helped clean the data during field enumeration.

In the next stage, the completed household questionnaires were also

checked thoroughly at HQ. The HQ census team validated the data by examining the distribution of variables on the livestock population and production after the completion of the census, and performed internal and external validations. Where necessary, the census team randomly called livestock households with questionnaires that needed further data validation.

2.6 Cost of census data collection

The costs of data collection play a key role in determining the quality of data. The costs of 2021 LC data collection was estimated based on the number of census staff (primarily enumerators and field supervisors), the training of enumerators, the likely number of interviews per day per enumerator based on the pilot interview, and costs of other census activities, such as that of hiring of transportation. About ngultrum (Nu.) 15.8 million were released to the 20 dzongkhags, of which about Nu. 15.6 million were reported as expenses (see Table 2.02).

2.6.1 Cost of Enumeration

The cost of enumeration included payment of daily subsistence allowance (DSA) to enumerators during the training of enumerators (ToE) and field data collection. University graduates who were recruited as enumerators were paid Nu.400 per day and provided working lunch, tea and snacks during the training of enumerators (ToE), and Nu. 1,100 per day during the field data collection for the duration taken to complete the enumeration. Furthermore, one-time voucher allowances of Nu. 1,000

were paid to enumerators to communicate with the Dashboard Managers in HQ and respondents for any data inconsistency check. For high-risk areas, where field enumeration was conducted by Gewog Livestock Extension Officials, their entitlements were paid as per the RGoB rules and regulations.

The other costs of enumeration included hiring of transportation to move field staff from one enumeration area to another. The number of vehicle to be hired, by *dzongkhag*, was estimated by the NSB HQ team, while the respective *dzongkhags* hired the vehicles locally. A few *dzongkhags* faced challenges hiring vehicles due to the pandemic and resulting high rental costs. NSB HQ helped these *dzongkhags* by hiring transportation centrally. However, the payment for hiring of vehicles was made by the respective *dzongkhags* from funds allocated to them for field operations.

2.6.2 Associated cost of NSB HQ

In addition to the costs of enumeration, there were a few other cost components, such as convening of consultation workshops with the RS-TWG members for drafting the questionnaire and providing master training to the census staff from NSB for ToE in *dzongkhags*. Field monitoring by the NSB census staff was yet another important exercise conducted to ensure the quality of data from the field. The master trainers, upon completion of the ToE, monitored the *dzongkhags* during the field operations.

Table 2.02 Cost of census data collection by dzongkhag, 2021

Dzongkhag	Total Work Deposited	Actual Expenditure Reported (BTN Nu.)
Bumthang	473,230	471,653
Chhukha	1,001,280	999,926
Dagana	987,860	982,562
Gasa	225,680	225,680
Haa	501,344	501,344
Lhuentse	627,458	627,458
Monggar	1,706,226	1,706,244
Paro	788,042	780,756
Pema Gatshel	777,022	777,022
Punakha	885,518	854,485
Samdrup Jongkhar	508,920	508,712
Samtse	719,996	638,996
Sarpang	646,710	646,710
Thimphu	487,131	477,293
Trashigang	1,397,199	1,397,199
Trashi Yangtse	770,236	713,323
Trongsa	482,130	482,130
Tsirang	1,165,730	1,165,730
Wangdue Phodrang	1,024,930	1,024,930
Zhemgang	631,781	599,443
NSB HQ		944,334
TOTAL	15,808,423	16,525,930

2.6.3 Measures taken to reduce the data collection costs

The estimates of data collection costs were based on a number of data collection costs, assumptions and parameters. For example, based on the pilot census, NSB determined the number of households to be enumerated daily by each enumerator as six to eight households on average. Accordingly, enumerators were hired, and deployed in groups of four per vehicle.

Management took various steps to minimize data collection costs and maximize data quality. One example was the use of local enumerators.

Dzongkhags recruited enumerators from their locality, which helped plan for and minimize costs of accommodation and transportation, as well as other logistics costs. Local enumerators were also able to communicate with respondents in their dialect, which enhanced understanding of the questionnaire and improved other aspects of data collection and reporting.

Where possible, the *dzongkhag* livestock sector also collaborated with *gewogs* and Dzongkhag Veterinary Hospitals (DVH) for the use of their vehicles during the census, by using their census budgets to cover fuel costs and travel allowance/daily allowance of drivers.

Chapter 3

LIVESTOCK POPULATION

3.1 Introduction

This chapter presents livestock statistics, including the number of animals, by breed and type, and herd structure on the reference day, and their dynamics during the reference period. The census collected detailed statistics on the number of animals, broken down by breed, age and sex. For herd

dynamics, entries and exits of animals from the herd during the reference period were also recorded. Common items collected included the number of births (calf<1 year old), the number of animal deaths, and the number of live animals lost or stolen during the reference period.

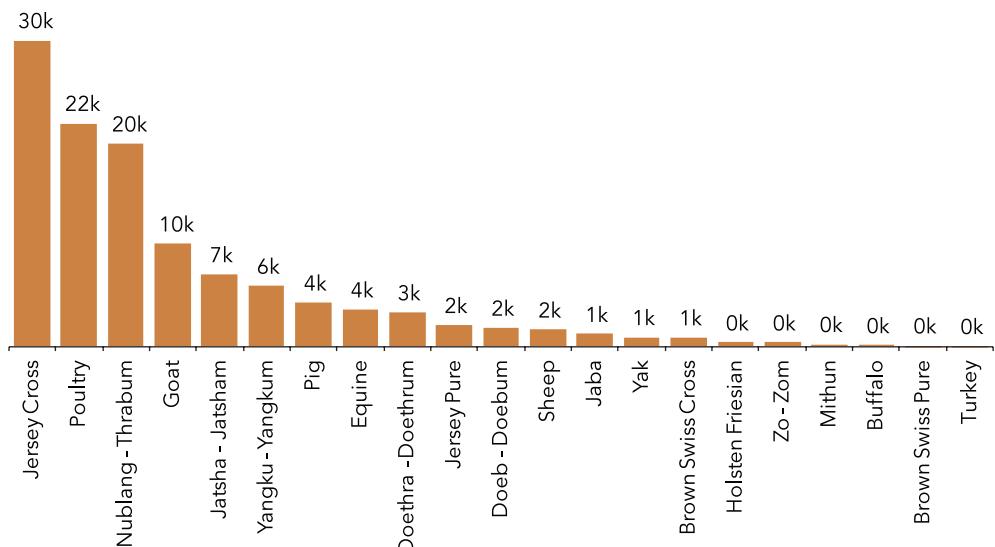

Figure 3.01 Livestock holding, by type, 2021

Table 3.01 Livestock holders, by type, and by dzongkhag, 2021

Dzongkhag	Permanent	Temporary	Institutional	(Number) TOTAL
Bumthang	1,103	32	7	1,142
Chhukha	3,386	93	3	3,482
Dagana	3,454	56	7	3,517
Gasa	401	5	2	408
Haa	1,029	24	17	1,070
Lhuentse	1,626	25	12	1,663
Monggar	4,536	27	3	4,566
Paro	2,192	81	19	2,292
Pema Gatshel	2,276	55	6	2,337
Punakha	2,073	177	11	2,261
Samdrup Jongkhar	2,823	44	7	2,874
Samtse	7,465	121	5	7,591
Sarpang	3,621	191	18	3,830
Thimphu	676	124	7	807
Trashigang	5,063	62	11	5,136
Trashi Yangtse	2,016	36	4	2,056
Trongsa	1,121	26	5	1,152
Tsirang	3,337	59	8	3,404
Wangdue Phodrang	2,690	163	13	2,866
Zhemgang	1,613	72	10	1,695
Bhutan	52,501	1,473	175	54,149

3.2 Livestock holdings

According to the results of the 2021 LC, a total of 54,149 holders (see Table 3.01) were recorded, of which, 97 percent are permanent holders (52,501 households), 2.7 percent are temporary holders (1,473 households) and about 0.3 percent are non-household sector (175 holders). A majority of permanent holders are in Samtse (14.2 percent), Trashigang (9.6 percent) and Monggar (8.6 percent) while temporary holders are in Sarpang (13 percent), Punakha (12 percent) and Wangdue Phodrang (11.1 percent). Three dzongkhags- Paro (10.9 percent), Sarpang (10.3 percent)

and Haa (9.7 percent) -accounted for the highest number of non-household holdings in the country.

In terms of livestock type, the majority of holders raised Jersey cross cattle (30 thousand holders), followed by poultry (22 thousand holders) and Nublang-Thrabum (20 thousand holders). Figure 3.01 shows the livestock holders in 2021 by type of livestock. Across dzongkhags, Trashigang (10 percent), Monggar (9.6 percent) and Sarpang (8.8 percent) have the highest jersey cross holders compared to rest of the dzongkhags. As for poultry,

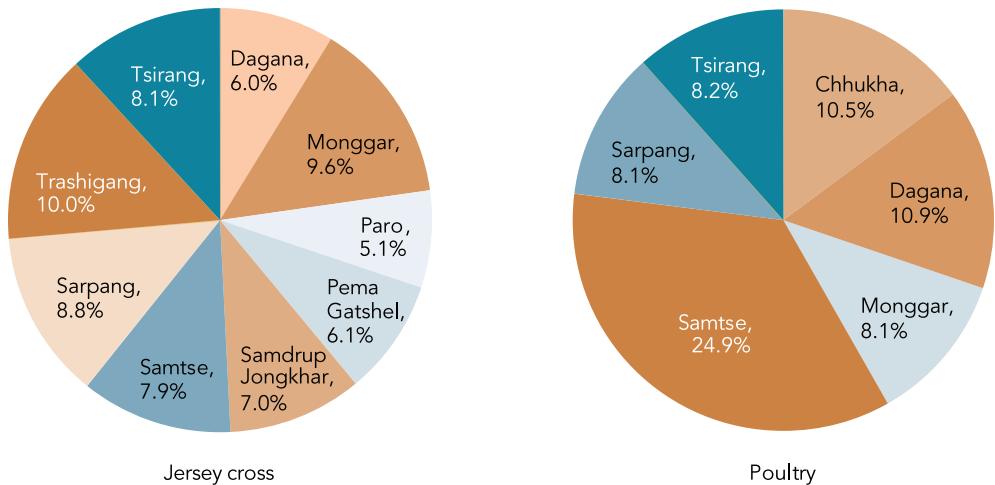

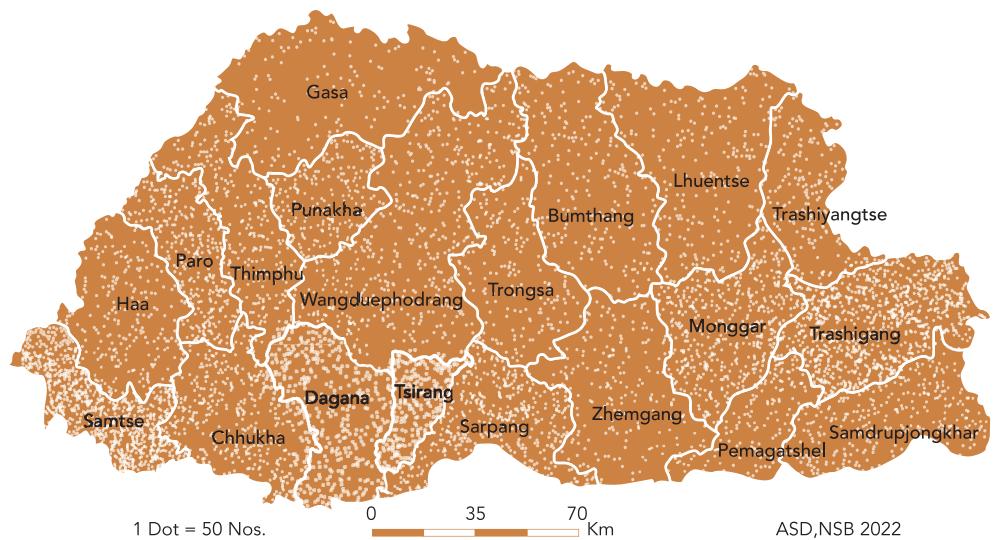

Figure 3.02 Share of Jersey cross and poultry holders, by dzongkhag, 2021

Samtse (24.5 percent), Dagana (10.9 percent), and Chhukha (10.5 percent) dzongkhags have more poultry holders compared to other dzongkhags.

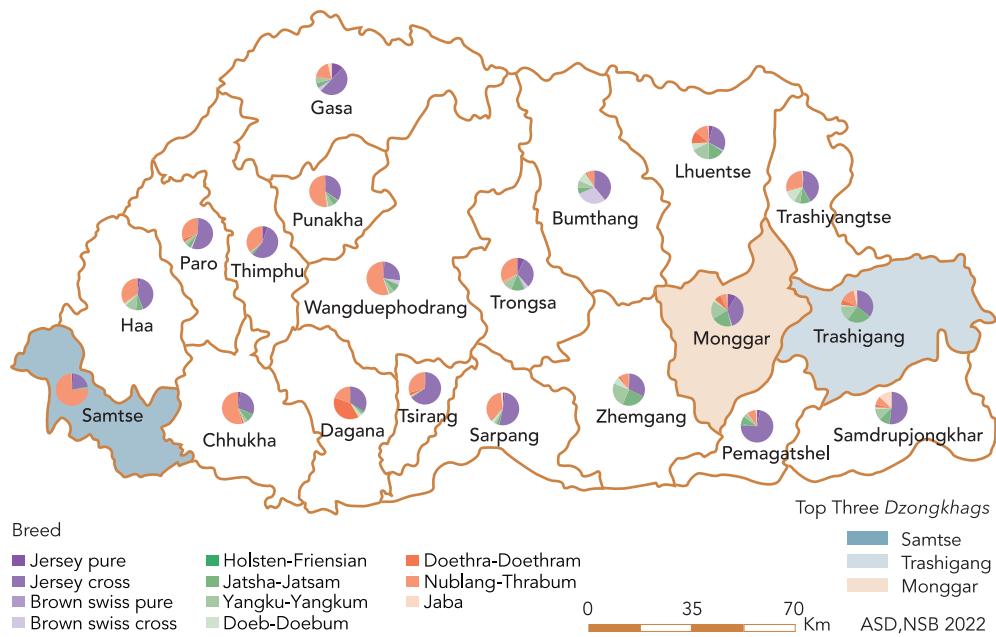

3.3 Livestock herd structure

Livestock are an essential part of the farming system across Bhutan. A wide

range of livestock (see Annex Tables A3.01- A3.21) are reared by holders, including both bovine and other livestock. Map 3.01 shows the bovine density map based on the census data, with bovine density estimated at 9 animals per square km in 2021. Samtse (31 animals per sq. km) had the highest

Map 3.01 Bovine livestock density by dzongkhag, 2021

Map 3.02 Cattle population by *dzongkhag*, and by breed type, 2021

density of bovine animals, followed by Trashigang (20 animals per sq. km) and Tsirang (19 animals per sq. km).

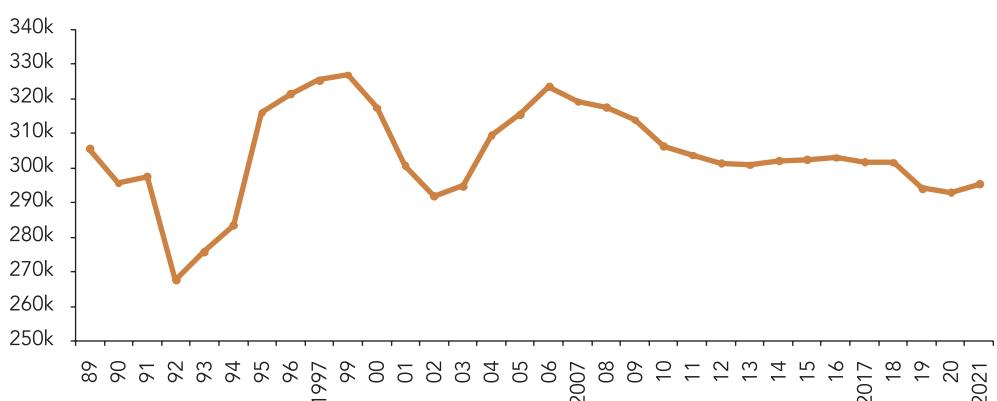

Table 3.02 summarizes livestock population in 2021, by *dzongkhag*. A total of 295,444 cattle (see Map 3.02) was recorded in the 2021 LC, an increase of 5 percent from 2020. Figure 3.03 shows the average cattle population from 1989 to 2021. The cattle population on an average has been declining since 2006.

3.3.1 Milch population

The distribution of improved and other milch population are shown in Table 3.03. The improved milch population, such as Jersey and Brown Swiss cattle breeds, increased in recent years (see Figure 3.05), while the milch population of local breeds decreased (see Figure 3.06). This seems to indicate that preference for improved livestock breeds have increased among small-scale livestock holders in the country. Map 3.03 shows the geographic distribution of the bovine milch population, by breed, in 2021.

Table 3.02 Livestock population by dzongkhag, 2021

Dzongkhag	Bovine population					Other livestock population							(Number)

3.3.2 Improved livestock breed profile

Table 3.04 presents the Brown Swiss population, by dzongkhag, in 2021. About 4,984 Brown Swiss cattle were recorded in the census, of which 57 percent were in Bumthang dzongkhag. Table 3.05 presents the Jersey

population of government farms in 2021. There were about 116,134 Jersey in the country, of which about 94 percent were Jersey cross. Across dzongkhags, Sarpang (9.8 percent), Trashigang (8.5 percent) and Monggar (8.4 percent) had the highest number of Jersey cross cows.

The census recorded about 1,007 Holsten Friesian in the county in 2021 (see Table 3.06). Chhukha (21.6 percent), Trashigang (17.8 percent) and Samtse (16.6 percent) had the highest number of Holsten Friesian. The number of milching Holsten Friesian is

330 (32.8 percent) of the total recorded.

3.3.3 Other bovine livestock breed profile

The other bovine livestock breed includes breeds commonly found in rural areas, such as mithun, *jatsha-jatsham*,

Table 3.05 Jersey population by dzongkhag, 2021

yangku-yangkum, doeb-doebum, doethra-doethram, nublang-thrabum, jaba, buffalo, yak, zo-zom, equine, pig, poultry, sheep, goat, etc. The details of these livestock, by dzongkhag and breed, are provided in Annex Tables A3.06 to A3.21.

The population of other bovine livestock saw inconsistent growth over the past few decades (see Figure 3.06). For example, the pig population

dropped between 1997 and 2014 then grew in recent years. Other livestock populations, such as that of yak, equine and sheep, have been dwindling in recent years.

The census recorded a total of 385 buffalo in 2021 (see Table 3.07), down 3 percent from the previous year; 7,244 *doeb-doebum* (see Table 3.08), down 22 percent; 14,084 *doethra-doe-thrum* (see Table 3.09), up 25 percent

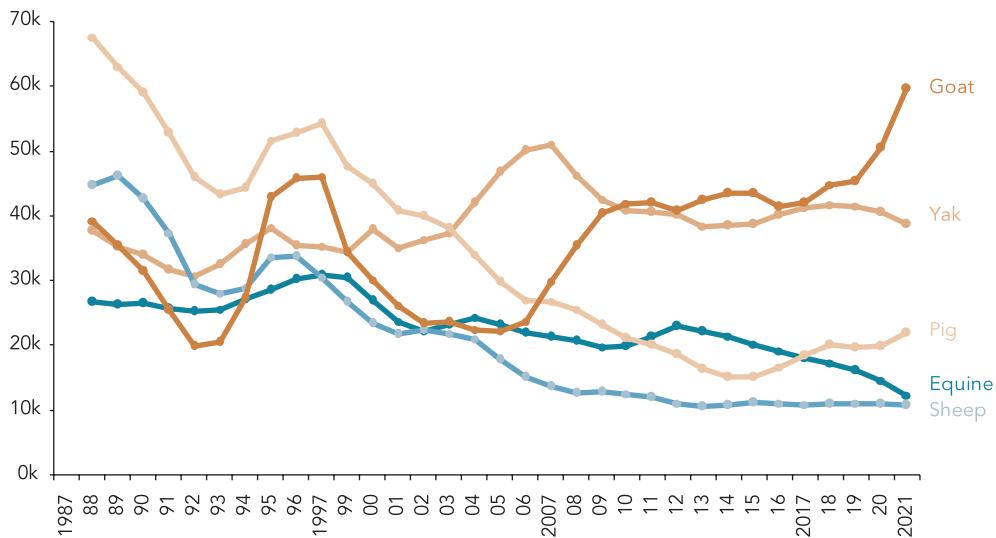

Figure 3.06 Average number of other livestock population from 1987 to 2021

compared to 2020; and 4,008 *jaba* (see Table 3.10).

Furthermore, the census recorded 26,951 *jatsha-jatsham* (see Table 3.11); 347 *mithun* (see Table 3.12); 98,840 *nublang-thrabum* (see Table 3.13); 38,642 *yak* (see Table 3.14), down 6 percent; 22,192 *yangku-yangkum* (see Table 3.15), down 13 percent; and 11,161 *zo-zom* (see Table 3.16), up 5 percent compared to 2020.

According to FAO, other domestic animals, such as cats and dogs, should be excluded from livestock statistics unless they are being raised for food or other agricultural purposes. The LC 2021 enumerated the number of utility/pet cats and dogs (see Table A3.21) raised by livestock holders as they provide livestock admin support services. Stray dogs and cats are excluded, be it in

urban or in rural areas. Furthermore, if a household has only a dog or a cat but no other livestock, that household was also excluded from the census.

3.4 Livestock herd dynamics

Understanding livestock herd dynamics has become important to keep track of entries and exits of animals from the herd for a given reference period. FAO's guidelines on methods for estimating livestock production and productivity recommend, as a minimum, to note the following statistics on livestock:

- Number of births.

- Number of other entries of animals: purchased, received as donation or otherwise acquired.
- Number of animals slaughtered on the farm (including those slaughtered elsewhere but on behalf of the agricultural holding).
- Number of other exits of animals: sold, given or otherwise disposed of.

The breakdown of other exits from the farm include the number of animals sold, of which the number of animals sold for slaughter; the number of animals otherwise disposed of, of which the number of animals disposed for slaughter; the number of dead animals, broken down by causes of death; and other exits, not previously mentioned (stolen or lost animals).

3.4.1 Calf less than 1 year

The 2021 LC collected information on the number of calves less than 1 year of age, by type. Table 3.17 shows the summary of calves less than 1 year old in 2021 for improved livestock breeds, by dzongkhag and type. A total of 25,682 calves were recorded in 2021, of which 11.7 percent were from Sarpang, 9.4 percent from Samtse and 8.6 percent from Monggar. New born Jersey cross accounted for about 90 percent of the total calves born for improved livestock.

By gender, about 55 percent of the total calves born for improved livestock were female.

In terms of calves less than 1 year for other bovine livestock (see Table 3.18), a total of 31,029 were recorded in 2021. *Nublang-Thrabum* (41.0 percent) and *Yangku-Yangkum* (10.9 percent) accounted for the highest calves in 2021. Across dzongkhags, Samtse accounted for 14.1 percent, Trashigang for 12.1 percent and

Wangdue Phodrang for 9.5 percent of the total calves born in 2021.

3.4.2 Livestock lost

The census gathered information on the number of exits of animals through loss during the 2021 reference period. Holders reported about 7,488 animals as lost in 2021, of which 68.6 percent (5,377 birds) were poultry and 21.5 percent (1,686 cows) were cattle. Table 3.19 shows the number of bovine livestock lost in 2021, by

dzongkhag. Wangdue Phodrang (293 cows) and Punakha (175 cows) reported the highest loss of cattle in 2021. The detailed number of animals lost, by dzongkhag and type, are provided in Annex Table A3.23. The lost livestock reported by holders includes only those animals who lost their lives or were stolen by someone where the holders do not know the whereabouts of the animals.

The other livestock types lost and reported by holders included equine, pig, poultry, sheep and goat (see Table 3.20). The number of poultry losses reported by holders was alarming, with 5,377 birds lost during the reference year. Of the total number of poultry lost, Samtse (42 percent), Dagana (20 percent) and Chhukha (6 percent) dzongkhangs reported the highest losses in 2021.

3.4.3 Livestock death

The census also collected information on the number of animals exiting the herd through death due to any reasons.

About 11,075 holders reported bovine livestock deaths during the reference year. About 13,143 holders reported other livestock deaths, such as equine, pig, poultry, sheep, and goat.

Holders were also asked to report the top three reasons for or causes of death of their animals. Among

many potential reasons, the top three causes of bovine death in 2021 were death due to diseases, wildlife depredation (death due to tiger, bear, etc.) and accident. Table 3.21 shows the number of holders who reported the top three causes of livestock death in 2021. For other livestock, the top three reported reasons for death were death due to other reasons, death due to disease and death due to wildlife predation. Death due to other reasons for poultry, for example, included lack

of feed, birds picking each other, birds slaughtered for meat, and birds being predated by domestic animals like dogs and cats.

Table 3.22 shows the summary of the actual number of bovine livestock death by *dzongkhag* in 2021. A total of 19,790 bovine livestock deaths were reported, of which, Wangdue Phodrang (14.5 percent), Trashi Yangtse (11.7 percent) and Monggar (9.1 percent) reported the highest numbers among

the *dzongkhags*. Roughly 17,360 cattle death were reported, which is about 88 percent of total bovine deaths (see Table 3.22). The detailed livestock death in 2021, by *dzongkhag* and by *gewog*, are provided in Annex Table A3.21.

Table 3.23 shows the number of other livestock deaths in 2021, by *dzongkhag*. The majority of other livestock deaths came from the poultry category, with 891,326 deaths . Of the total poultry deaths, five *dzongkhags* reported

Chapter 4

LIVESTOCK PRODUCTION

4.1 Introduction

This chapter presents the core livestock products produced in the country either from live or slaughtered and dead animals. Products from slaughtered and dead animals include meat, while products from live animals include milk, butter, cheese, *chugo*, eggs, honey and fibers, such as wool from sheep and yak. While most of the holdings in the household sector are able to precisely report on their number of livestock, most do not keep records of their livestock production and are unable to precisely estimate this production. Directly reporting on this production information was found to be difficult and challenging. For example, questions such as "What is the total milk production during the reference period?" was observed as difficult for holders to answer directly.

Enumerators during the ToE were trained to probe with a set of questions instead of simply asking questions that were there in the questionnaire. The interviewing techniques were demonstrated during the training so that enumerators could get a better

sense and precise estimation of the production that occurred. Estimation of livestock production precisely is a global issue, so FAO recommends asking auxiliary questions to the respondent to enable quality estimation of production amounts. The 2021 LC collected production data for the following groups of livestock products:

- Dairy production;
- Meat production; and
- Other livestock production.

4.2 Dairy production

Data on dairy production included the quantity of milk, butter, cheese and *chugo* produced during the reference period. Milk production refers to the total fresh milk produced, and covers milk production from all bovine livestock. The milk produced from other animals, such as goats and sheep, are not included although recommended by the FAO. According to their less significance to the total Bhutanese economy, the census ignored the milk production from goat and sheep. The key items included in the validation of data for the milk production are the number of milch bovine animals,

Table 4.01 Dairy production by dzongkhag, 2021

Bhutan	54,654.06	1,929.52	3,154.30	197.62	

average milk produced per animal per day and the number of lactating days of the animal.

Table 4.1 presents dairy production by dzongkhag and by government farms in 2021. In terms of the dairy production, the economy recorded about 54,654 MT (down 6 percent) of milk; about 1,930 MT (down 8 percent) of butter; about 3,154 MT (down 25 percent) of cheese; and about 197 MT (up 11 percent) of chugo compared to 2020. The detailed individual dairy production including utilization, consumption and sales are provided.

4.2.1 Milk production

Figure 4.01 shows milch population and milk production in 2021 by dzongkhag. According to the census, Trashigang (6,820 MT), Samtse (4,829 MT) and Wangdue Phodrang (4,559) recorded the highest milk production in the country in 2021. The share in milk production ranged from 1 percent of the

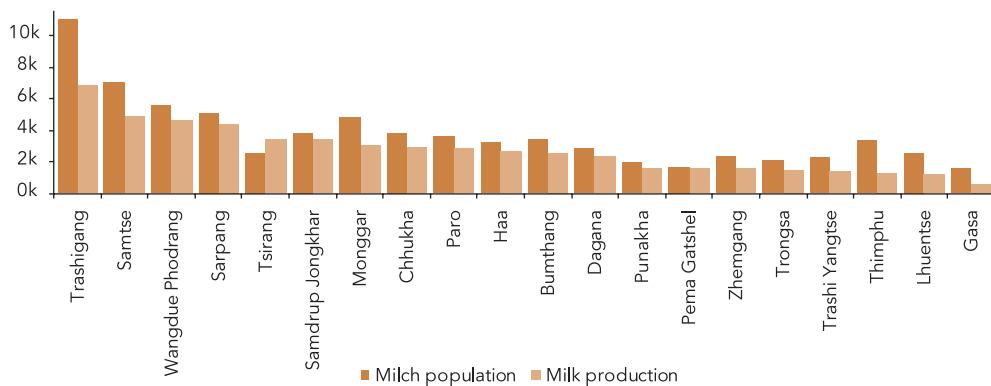

Figure 4.01 Milch population and milk production by dzongkhag, 2021

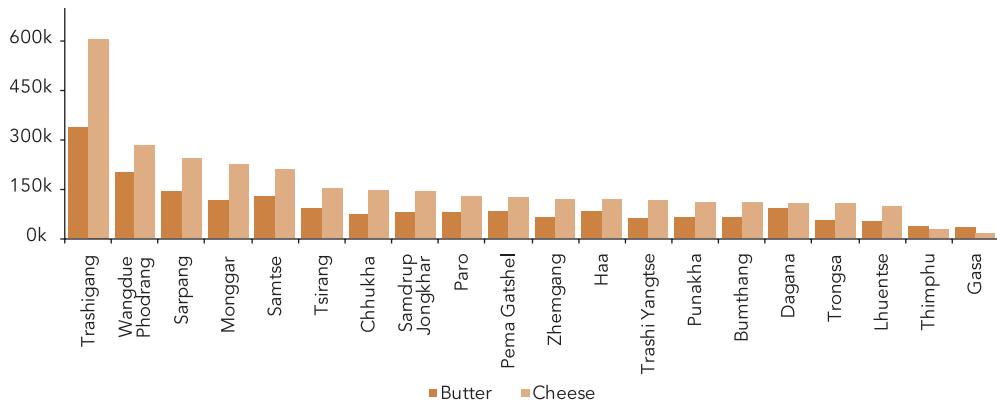

Figure 4.02 Butter and cheese production by dzongkhag, 2021

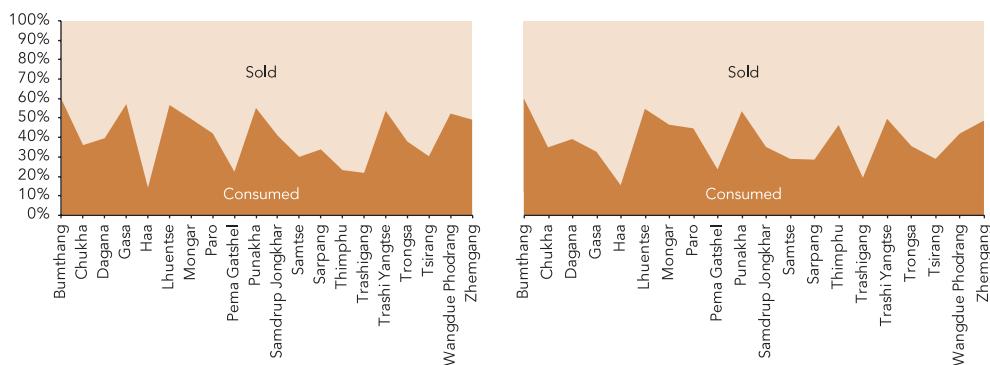

Figure 4.03 Utilization of butter and cheese by dzongkhag, 2021

national total in Gasa to 12.5 percent in Trashigang. Samtse and Wangdue Phodrang accounted for 8.9 percent and 8.4 percent, respectively, of the total milk production in the country.

4.2.2 Butter and Cheese production

Figure 4.02 shows that the highest butter and cheese production in 2021 were recorded in Trashigang (butter-17.5 percent; cheese-19.2 percent), Wangdue Phodrang (butter-10.4 percent; cheese-8.9 percent) and Sarpang

(butter-7.4 percent; cheese-7.6 percent).

The census also collected information on the utilization of dairy products. Here the utilization concept hinges around self-consumption and sales, if any, from total production. Other aspects of utilization, such as dairy products given as gift, bartered for labour, etc., were excluded from the census. Figure 4.03 shows that from the total production of butter and cheese, sales of these products were highest in Haa and Trashigang. This means that for these dzongkhags, the larger share

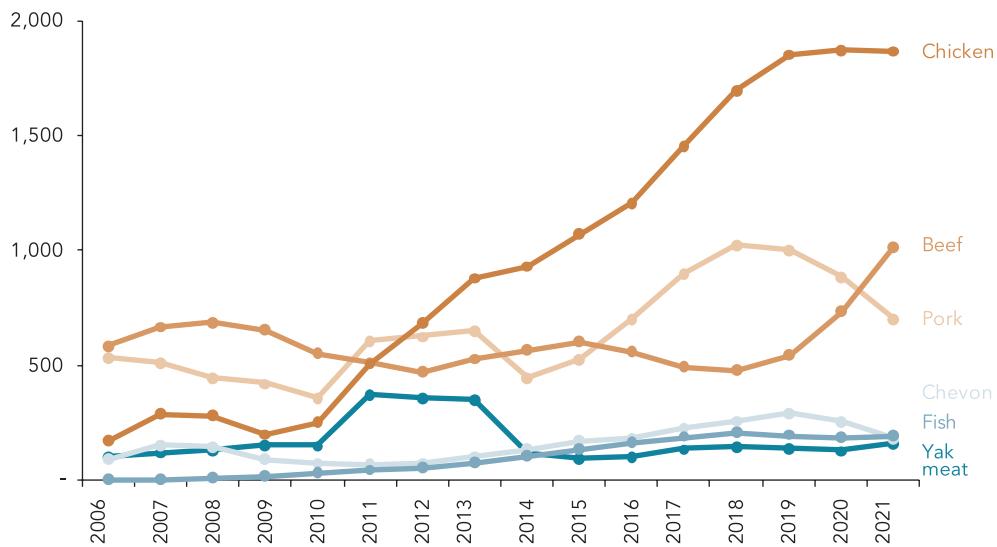

Figure 4.04 Average meat production from 2006-2021

of butter and cheese production are for sales, with some own consumption.

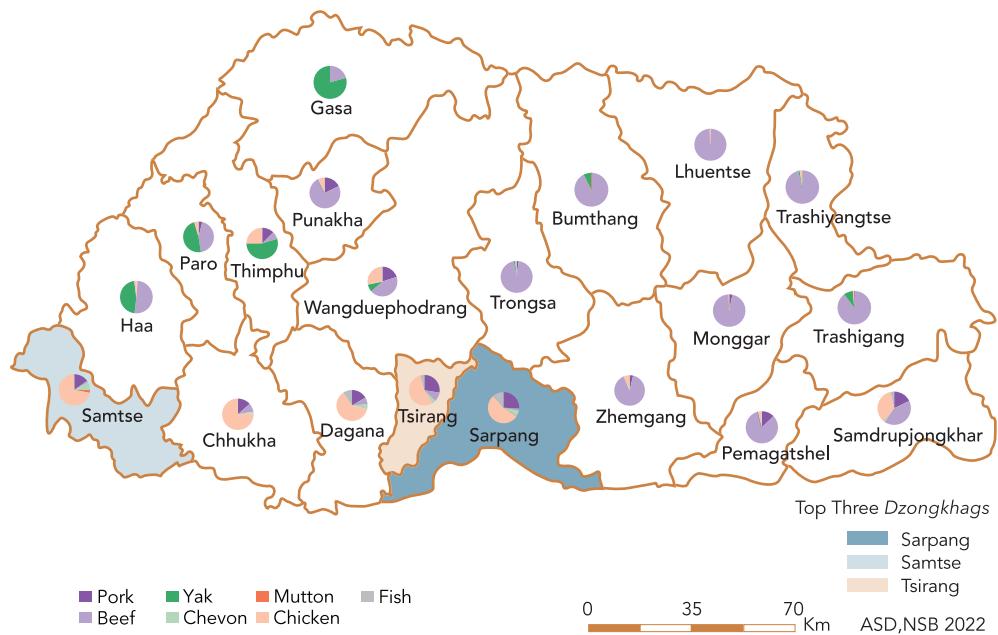

4.3 Meat production

According to the FAO, meat is defined as the flesh of animals (excluding fish) used for food. In production data, meat is normally reported inclusive of bones and exclusive of meat that is unfit for human consumption.

The total meat production in Bhutan was estimated by asking livestock holders about the number of livestock deaths (inclusive of slaughter), livestock diseases, and meat produced during the reference period. While obtaining information on the number of animals slaughtered on the farm or in other slaughtering points is difficult, the meat produced from slaughtered animals can be obtained directly. For example, some individual holders reported meat

production from animals slaughtered for personal consumption during festivals like losar in the rural community.

The common items collected to estimate total meat production included the number of deaths, by category of livestock, and their causes of death. Enumerators during the ToE were trained to probe, if the household reported livestock death during the reference period, about carcass weight, age of the animal and whether or not the meat was consumed. The death of an animal could be due to many reasons, such as disease, wildlife predation, natural death due to old age, etc. Meat produced and unfit for human consumption due to disease was excluded from census meat production statistics. Detailed meat production statistics are provided in Annex Tables A4.05 to Table A4.11.

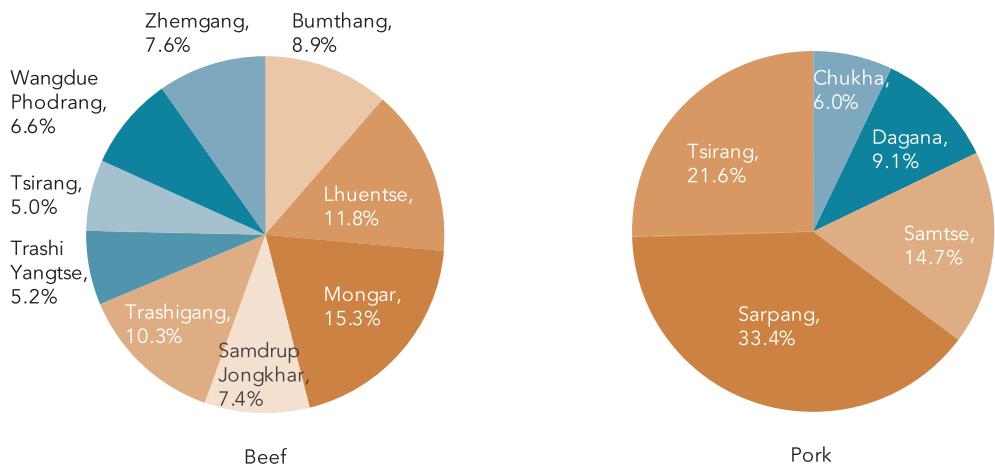

Figure 4.05 Share of beef and pork production by dzongkhag, 2021

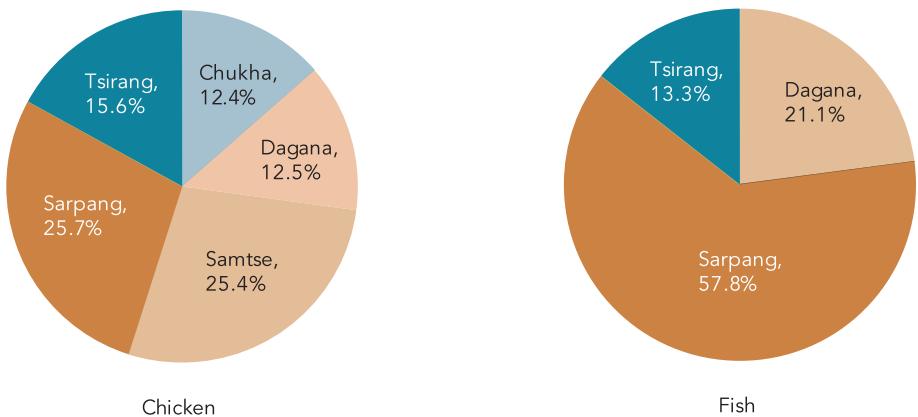

Figure 4.06 Share of chicken and fish production by dzongkhag, 2021

Figure 4.04 presents the 3-year moving average of meat production from 2006 to 2021, and shows an increasing trend in the production of beef and chicken in recent years. The production of other meats, such as that of pork, chevon, fish and yak meat, show a declining trend.

Map 4.01 shows Bhutan's meat production in 2021, by type of product. Meat production increased in 2021

compared to 2020 in all categories except for pork and chevon. Pork production decreased by almost 18 percent since 2020 and totaled about 700 MT in 2021. Chevon production showed the largest decrease, of more than 30 percent, and stood at almost 184 MT in 2021. Table 4.02 presents detailed meat production in 2021 by dzongkhag.

4.3.1 Beef and Pork production

Figure 4.05 shows beef and pork production in 2021, by *dzongkhag*. Across *dzongkhags*, Monggar, Lhuentse and Trashigang accounted for the highest production of beef, at 15.3 percent, 10.3 percent and 11.8 percent of the national total, respectively. For pork production, Sarpang, Tsirang and Samtse accounted for the highest shares at 33.4 percent, 21.6 percent and 14.7 percent, respectively.

4.3.2 Chicken and Fish production

Chicken production saw a small annual increase of 3 percent from about 1,819 MT in 2020 to 1,866 MT in 2021. Total fish production in 2021 was 193 MT, an increase of 18 percent from 2020. Figure 4.06 shows the share of chicken and fish production by *dzongkhag*, with Sarpang (28.1 percent), Samtse (27.8 percent) and Dagana (13.6 percent) accounted for the highest chicken production in the country. Three *dzongkhags*- Sarpang, Dagana and Tsirang - collectively made up more than 92 percent of total fish production in the country.

4.3.3 Aquaculture

A total of 554 holders reported the practice of aquaculture in 2021. According to FAO, aquaculture is considered as the farming of aquatic organisms, including fish, molluscs, crustaceans and aquatic plants. The 2021 LC, to bring clarity and common understanding, defined aquaculture as the rearing of fish in enclosed structures,

such as ponds. To avoid confusion, capture fisheries from rivers were excluded. If a holder, with or without appropriate licenses, reared fish in a pond and if there was any harvest of fisheries from the ponds, these activities were considered as aquaculture.

The census recorded 750 fish ponds covering a total of 288,445 square metres of land. The majority of fish farmers resided in Tsirang (31.6 percent), Dagana (18.2 percent), Samtse (15.7 percent) and Sarpang (15.0 percent) *dzongkhags*. Table 4.03 shows the total stock of fish in the ponds by *dzongkhag*. The number of fish in ponds, as reported by holders, were based on the number of fingerlings put in the ponds. The stock estimated by holders may thus be under reported as this approach did not take into account an increase in stock due to breeding.

4.4 Other livestock production

Other livestock production (see Table 4.04) such as eggs, honey and wool, were also collected in the census. Egg production covers all eggs produced during the reference period, regardless of poultry species. Data were also collected about local poultry (male and female), improved poultry-layer and broilers. Detailed production statistics for other livestock are provided in Annex Tables A4.12 to A4.14.

4.4.1 Egg production

Egg production and the poultry population have generally seen an

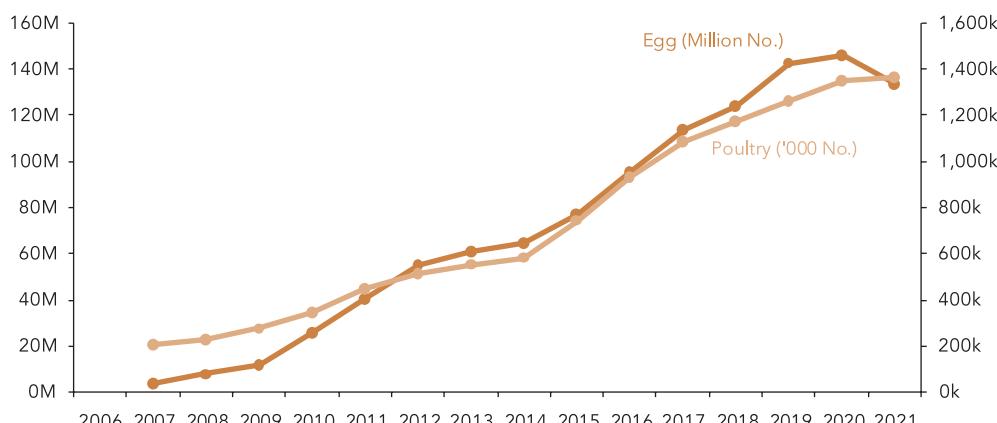

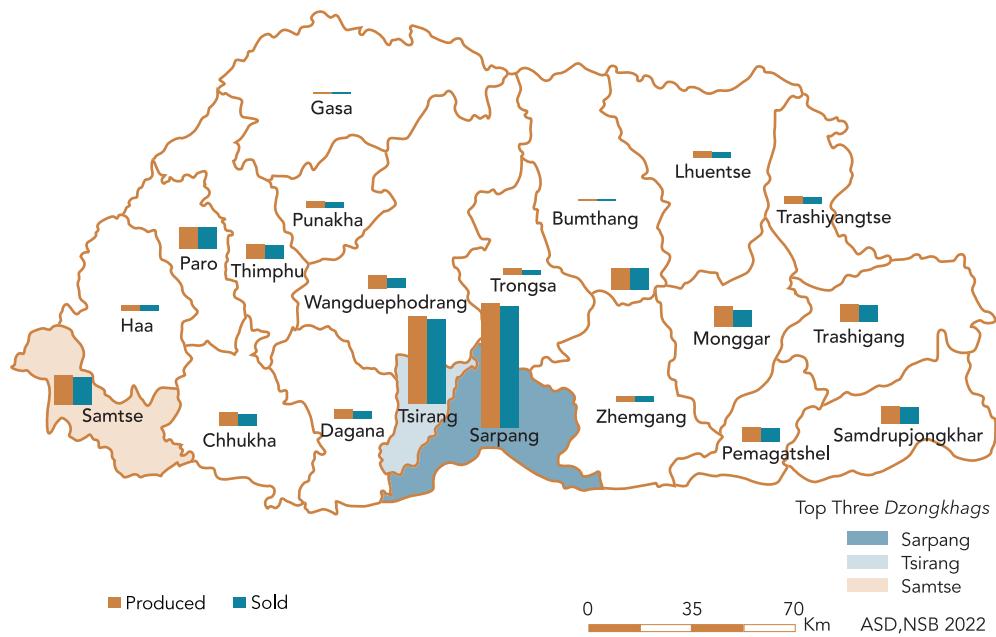

Figure 4.07 Average egg production from 2008-2021

upward trend since 2007, though egg production fell in 2021 (see Figure 4.07). In 2021, total egg production was recorded at a little over 133 million eggs, a decrease of 21 percent compared to 2020.

Across dzongkhags, Sarpang alone accounted for the highest egg production with 38 million eggs, or 29.1 percent of the total, followed by Tsirang with 20.3 percent and Samtse with 6.9 percent (see Map 4.03). Figure 4.08 shows the improved poultry layer and egg production, by dzongkhag, in 2021. The number of improved poultry layers ranged from 1k in Gasa to 182k in Sarpang.

4.4.2 Apiculture

The census also collected information on the number of holders engaged in the rearing of bees, beehive type and the amount of honey produced. Table 4.05 shows the number of holders engaged in rearing of bees, by dzongkhag and type of beehive. The Census revealed

Wangdue Phodrang	5	3	3	6
Zhemgang	10	16	7	23
Bhutan	7,097	17,041	4,892	21,933

that there were 7,097 bee holders in the country, and they were highly concentrated in Samtse (32.9 percent), Sarpang (18.2 percent), Dagana (16.0 percent) and Tsirang (15.1 percent). A total of 21,933 beehives were recorded in 2021, about 78 percent of which were local and the rest, 22 percent, were improved beehives.

About 43 MT of honey were produced in 2021, a decrease of 2 percent from the previous year. Sarpang (30.2 percent),

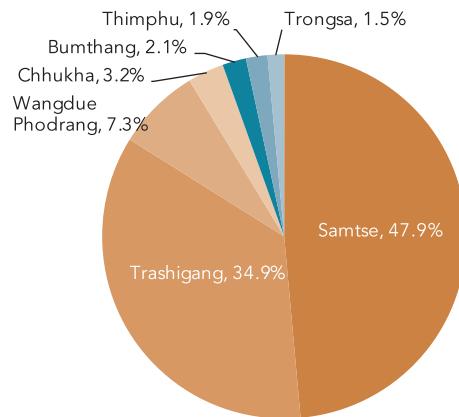

Figure 4.09 Share of wool production by dzongkhag, 2021

Bumthang (23.6 percent), Samtse (18.6 percent) and Tsirang (7.4 percent) were recorded as the highest honey producing dzongkhags in the country.

4.4.3 Wool production

Bhutan produced about 5.8 MT of wool in 2021, a drop of 5 percent from the previous year. About 85 percent of the total wool produced were from sheep and remaining 15 percent were from Yak. In terms of production share, Samtse (47.9 percent), Trashigang (34.9 percent) and Wangdue Phodrang (7.3 percent) accounted for the highest production of wool in the country, driven by their high number and share of the sheep population. Figure 4.09 shows the share of wool production by dzongkhag in 2021, excluding those dzongkhags that produced less than 1% of total wool production.

2021 LIVESTOCK CENSUS OF BHUTAN

MODULE 1: IDENTIFICATION

A1_Dzongkhag	Prefilled
A2_Gewog	Prefilled
A4_Chiwog	
A5_Village	
A1_Type of holding Permanent: households permanently residing in the village and rearing livestock. Temporary: Transient holdings rearing livestock. E.g. DANTAK workers, PWD camps, teachers separately rearing livestock	01-Permanent 02-Temporary 03-Institutional (>>A2_)
A7_House Number	
A8_Thram Number	
A2_Location of the holding 01-Rural 02-Urban	01-Rural 02-Urban
A9_Respondent Name	
A9_1_Household Serial No.	
A9_2_Name of Institution	
A10_Contact number of the respondent	
A11_Tap to record the date of Enumeration	
A12_Tap to record GPS <i>Please ensure that your GPS location is switched on before collecting the data. Please be outside of the house or out in an open space to collect the GPS location data.</i>	

MODULE 2: LIVESTOCK BOVINE POPULATION

B1. Did you or your household rear any LIVESTOCK during the reference year? <i>Reference year: The census reference period is from Jan - Dec. 2021.</i>	01-Yes 02-No (>>B3) <input type="checkbox"/>
B2_1. What LIVESTOCK BREED do you have on this day? Please select all that apply.	01-Jersey Pure 02-Jersey Cross 03-Brown Swiss Pure 04-Brown Swiss Cross 05-Karan Fries/Holstein-Friesian 06-Mithun Pure 07-Jatsha-Jatsham 08-Yanku-Yankum 09-Doeb-Doebum 10-Doethra-Doethram 11-Nublang-Thrabum 12-Jaba 13-Buffalo 14-Yak 15-Zo/Zom (Goleng) <input type="checkbox"/> <input type="checkbox"/>
B2_2. Do you have Calf less than 1 year?	01-Yes 02-No (>>B2_3) <input type="checkbox"/>
B2_2_1. Total no of male calf less than 1yr	<input type="text"/>
B2_2_2. Total no of female calf less than 1yr	<input type="text"/>
B2_3. Total no of Heifer (Yarbu/ Korali/ Batham) <i>Heifers are those young female cattle that have not yet given birth. If there is none, indicate with number zero.</i>	<input type="text"/>
B2_4. Total no of Milching <i>Those female cattle that are lactating. If there is none, indicate with number zero.</i>	<input type="text"/>
B2_5. Total no of Dry <i>Dry are those female cattle that are not lactating at the time of census enumeration. If there is none, indicate with number zero.</i>	<input type="text"/>
B2_7. Total no of Bull <i>Include all types of bull. If there is none, indicate with number zero.</i>	<input type="text"/>
B2_6. Total no of Breeding Bull (Phalang/Bew Goru/ Phatoka) <i>Bulls kept especially for the purpose of breeding. From the total bulls declared, how many are breeding bulls? If there is none, indicate with number zero.</i>	<input type="text"/>

B2_8. Total no of Bullock <i>Bulls kept especially for the purpose of ploughing the field. If there is none, indicate with number zero. of the total bull declared, how many are bullock used for ploughing?</i>	<input type="text"/>
B2_10. Were there any livestock bovine deaths during the reference year? <i>Death could be from different sources such as natural deaths, wild-life predation, slaughter, accidents, etc.</i>	01-Yes 02-No (>>L1) <input type="checkbox"/>
B2_11. What LIVESTOCK BREED death did you have during the reference year? Please select all that apply.	01-Jersey Pure 02-Jersey Cross 03-Brown Swiss Pure 04-Brown Swiss Cross 05-Karan Fries/Holstein-Friesian 06-Mithun Pure 07-Jatsha-Jatsham 08-Yanku-Yankum 09-Doeb-Doebum 10-Doethra-Doethram 11-Nublang-Thrabum 12-Jaba 13-Buffalo 14-Yak15-Zo/Zom (Goleng) <input type="checkbox"/> <input type="checkbox"/>
B2_12. Total no of Death	<input type="text"/>
B2_13. What were the top 3 main reasons for Death?	01-Disease 02-Wildlife Depredation (death due to Tiger, bear, etc.) 03-Natural Death (e.g. old age) 04-Accident 96-Others (>>B2_14) <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>
B2_14. Others (Specify)	<input type="text"/>
L1. Did the household lose any live bovine livestock during the reference year?	01-Yes 02-No (>>B3) <input type="checkbox"/> <input type="checkbox"/>
L2. What LIVESTOCK BREED did you lose during the reference year? Please select all that apply.	01-Jersey Pure 02-Jersey Cross 03-Brown Swiss Pure 04-Brown Swiss Cross 05-Karan Fries/Holstein-Friesian 06-Mithun Pure 07-Jatsha-Jatsham 08-Yanku-Yankum 09-Doeb-Doebum 10-Doethra-Doethram 11-Nublang-Thrabum 12-Jaba 13-Buffalo 14-Yak15-Zo/Zom (Goleng) <input type="checkbox"/> <input type="checkbox"/>
L2_1. Total no Lost	<input type="text"/>

MODULE 3: OTHER LIVESTOCK POPULATION

B3. Did you or your household keep any OTHER LIVESTOCK during the reference year? <i>Other livestock includes Equine, pig, poultry, turkey, sheep, goat, cat and utility dog.</i>	01-Yes 02-No (>>B7) <input type="checkbox"/>
B4_1. What OTHER LIVESTOCK do you have on this day? Please select all that apply.	01-Horse 02-Pig 03-Poultry (>>B4_2; B4_3; B4_4a; B4_4b) 04-Turkey (>>B4_4; B4_5) 05-Sheep 06-Goat 07-Cat (>>B4_6a) 08-Dog (Utility/Pet) (>>B4_6a) <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>
B4_2. Total no of local male <i>If there is none, indicate with number zero.</i>	<input type="text"/>
B4_3. Total no of local female <i>If there is none, indicate with number zero.</i>	<input type="text"/>
B4_4. Total no of improved male <i>If there is none, indicate with number zero.</i>	<input type="text"/>
B4_5. Total no of improved female <i>If there is none, indicate with number zero.</i>	<input type="text"/>
B4_4a. Total no of broiler <i>If there is none, indicate with number zero.</i>	<input type="text"/>
B4_4b. Total no of layer <i>If there is none, indicate with number zero.</i>	<input type="text"/>
B4_5a. Total no of Mule (Drey/Khachar) <i>A mule is the offspring of a male donkey (jack) and a female horse (ma re). If there is none, indicate with number zero.</i>	<input type="text"/>
B4_5b. Total no of Donkey (Bongku/Gadha) <i>If there is none, indicate with number zero.</i>	<input type="text"/>
B4_6a. Total no <i>If there is none, indicate with number zero.</i>	<input type="text"/>
B4_6. Were there any OTHER LIVESTOCK DEATH during the reference year? <i>Death could be from different sources such as natural deaths, wild-life predation, slaughter, accidents, etc.</i>	01-Yes 02-No (>>L1_Other) <input type="checkbox"/>

B4_7. What OTHER LIVESTOCK death did you have during the reference year? Please select all that apply.	01-Equine (Horse) 02-Pig 03-Poultry 04-Turkey 05-Sheep 06-Goat 07-Cat 08-Dog (Utility/Pet)
B4_7a. Total no of Death	
B4_7b. What were the top 3 main reasons for Death?	01-Disease 02-Wildlife Depredation (death due to Tiger, bear, etc.) 03-Natural Death (e.g. old age) 04-Accident 96-Others (>>B4_7c)
B4_7c. Others (Specify)	
L1_Other. Did the household lose any other live livestock during the reference year? <i>Lost refers to those live livestock that are lost and the farmer does not know their whereabouts.</i>	01-Yes 02-No (>>B7)
L2_Other. What Other LIVESTOCK BREED did you lose during the reference year? Please select all that apply.	01-Equine (Horse) 02-Pig 03-Poultry 04-Turkey 05-Sheep 06-Goat 07-Cat 08-Dog (Utility/Pet)
L2_1_Other. Total no lost	

MODULE 4: AQUACULTURE

B7. Did you or your household rear any FISH?	01-Yes 02-No (>>B9_1) <input type="checkbox"/>
B8_3. Total no of Fish Pond. <i>Please add all the fish ponds that the farmer has. Do not add the ponds that are not functional.</i>	<input type="text"/>
B8_4. Total area covered by Fish Pond (in square meters) <i>Please add the area of all fish ponds that the farmer has</i>	<input type="text"/>
B8_1. What FISH do you rear? Please select all that apply.	01-Comp. Carp <input type="checkbox"/> 02 -Grass Carp <input type="checkbox"/> 03-Rohu <input type="checkbox"/> 04-Cattla <input type="checkbox"/> 05-Brown Trout <input type="checkbox"/> 06-Rainbow Trout <input type="checkbox"/> 07-Snow Trout <input type="checkbox"/> 08-Mrigal <input type="checkbox"/> 09-Silver Carp <input type="checkbox"/> 10-Sturgeon <input type="checkbox"/> 11-Guppy <input type="checkbox"/> 12-Molly <input type="checkbox"/> 13-Koi Carp <input type="checkbox"/> 14-Angel <input type="checkbox"/> 15-Golden Mahseer <input type="checkbox"/> 96-Others (>>B8_1a) <input type="checkbox"/>
B8_1a. Others (Specify)	<input type="text"/>
B8_2. Total no. of Fishes in the ponds on this day. <i>Please add all the Fishes that the farmer has in the fish ponds.</i>	<input type="text"/>

MODULE 5: APICULTURE

B9_1. Did you or your household practice Apiculture? <i>Apiculture refers to the rearing of bees.</i>	01-Yes 02-No (>>B12) <input type="checkbox"/>
B9_1. What type of BEE do you have? Please select all that apply. <i>Local bees are those bees that are indigenous to the place. Improved bees are those that are being introduced by the government to boost production and better maintenance.</i>	01-Local Bees 02-Improved Bees <input type="checkbox"/>
B9_2. Total no. of LOCAL BEEHIVES	<input type="text"/>
B9_3. Total no. of IMPROVED BEEHIVES	<input type="text"/>

MODULE 6: LIVESTOCK PRODUCTION

B12. Did you produce any DAIRY PRODUCTS during the reference year? <i>Dairy products are milk, butter, cheese and chugo.</i>	01-Yes 02-No (>>B18_1) <input type="checkbox"/>
B13_1. What DAIRY PRODUCTS did you produce during the reference year? Please select all that apply.	01-Milk (>>B13_2_1; B13_3; B13_4_1; B13_5) <input type="checkbox"/> 02-Butter (>>B13_2_2; B13_4_2; B13_6) <input type="checkbox"/> 03-Cheese (>>B13_2_2; B13_4_2; B13_6) <input type="checkbox"/> 04-Chugo (>>B13_2_2; B13_4_2; B13_6) <input type="checkbox"/>
B13_2_1. Total Qty. Produced (ltr.) <i>Total production should be the sum of all for the reference year.</i>	<input type="text"/>
B13_2_2. Total Qty. Produced (KG) <i>Total production should be the sum of all for the reference year.</i>	<input type="text"/>
B13_3. Total Qty. Processed (ltr.) <i>Quantity processed should be only the quantity used for processing at your home.</i>	<input type="text"/>
B13_4_1. Total Qty. Consumed (Ltr.)	<input type="text"/>
B13_4_2. Total Qty. Consumed (KG)	<input type="text"/>
B13_5. Total Qty. Sold (Ltr.)	<input type="text"/>
B13_6. Total Qty. Sold (KG)	<input type="text"/>
B14. Did your household produce MEAT during the reference year? <i>Total meat produced should include meat produced from different sources such as natural deaths, wild-life predation, slaughter, etc.</i>	01-Yes 02-No (>>B16) <input type="checkbox"/>
B15_1. What type of MEAT did you produce during the reference year? Please select all that apply.	01-Pork 02-Beef 03-Yak meat 04-Chevon (goat meat) 05-Chicken 06-Fish 07-Mutton (sheep meat) <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>
B15_2. Total Qty. Produced (KG)	<input type="text"/>
B15_3. Total Qty. Sold (KG)	<input type="text"/>

B16. Did your household produce any EGGS/WOOL/HONEY during the reference year?	01-Yes 02-No (>>B18_1) <input type="checkbox"/>
B16_1. Which of the following did you produce during the reference year? Please select all that apply.	01-Egg (>>B16_1a; B16_1b) 02-Yak wool (>>B16_2; B16_3) 03-Sheep wool (>>B16_2; B16_3) 04-Honey (>>B16_2; B16_3)
B16_1a. Total Produced (No)	<input type="text"/>
B16_1b. Total Sold (no)	<input type="text"/>
B16_2. Total Qty. Produced (KG)	<input type="text"/>
B16_3. Total Qty. Sold (KG)	<input type="text"/>

MODULE 7: BREEDING AND FODDER

B18_1. Did you avail AI services for your cattle during the reference year? <i>Artificial insemination (AI) is a method of breeding cattle using frozen semen.</i>	01-Yes 02-No (>>B18_5) <input type="checkbox"/>
B18_2. Total no of AI availed <i>Indicate with zero if no AI was performed.</i>	<input type="text"/>
B18_2_1. Were there any AI services availed last year?	01-Yes 02-No (>>B18_5) <input type="checkbox"/>
B18_3. Total no of male progeny born from the previous year AI services	<input type="text"/>
B18_4. Total no of female progeny born from the previous year AI services	<input type="text"/>
B18_5. Did your household have land area under pasture cultivation during the reference year?	01-Yes 02-No (>>B19_1) <input type="checkbox"/>
B18_6. Total land area under Improved pastures (in Acre) <i>Improved pasture means grazing lands that are developed through improved seeds such as Grass mixture, Ruzi, Pasplau, Molasses grass, etc.</i>	<input type="text"/>
B18_7. Total land area under Winter Fodder (in Acre) cultivation. <i>Winter Fodder is the feed that is made available to feed the livestock during the winter when pasture is not available. E.g. oats, maize, swede, turnip, etc.</i>	<input type="text"/>
B18_8. Total number of fodder trees planted	<input type="text"/>

MODULE 8: BIOGAS

B19_1. Do you have Biogas?	01-Yes 02-No (>>B20_1)	<input type="checkbox"/>
B19_2. Select the size type	01-4 cubic metre 02-6 cubic metre 03-8 cubic metre 04-10 cubic metre 96-Others (>>B19_3)	<input type="checkbox"/>
B19_3. Others (Specify)		
B19_4. Is it functional?	01-Yes 02-No	<input type="checkbox"/>

MODULE 9: MIGRATION

B20_1. Do you practice Livestock Migration?	01-Yes 02-No (>>B20_7)	<input type="checkbox"/>
B20_2. Select the migration type	01-Inter-Migration (dzongkhag to dzongkhag) (>>B20_3) 02-Intra-Migration (within dzongkhag) (>>B20_5)	<input type="checkbox"/>
B20_3. Select the dzongkhag migrated to (>>B20_4) <i>Select the dzongkhag that the livestock herd have spent maximum period at.</i>	11-Bumthang 12-Chhukha 13-Dagana 14-Gasa 15-Haa And 15 other symbols [2]	<input type="checkbox"/>
B20_4. Select the gewog migrated to	1101-Chhoekhor 1102-Chhumig 1103-Tang 1104-Ura 1201-Bjagchhog And 189 other symbols [1]	<input type="checkbox"/>
B20_5. Select the dzongkhag you are at. (>>B20_6) <i>Please select the point of enumeration dzongkhag by yourself.</i>	11-Bumthang 12-Chhukha 13-Dagana 14-Gasa 15-Haa And 15 other symbols [2]	<input type="checkbox"/>
B20_6. Select the gewog migrated to	1101-Chhoekhor 1102-Chhumig 1103-Tang 1104-Ura 1201-Bjagchhog And 189 other symbols [1]	<input type="checkbox"/>
B20_7. Tap to End Time
