Consumer Price Index (CPI): May 2022
(Release date: $30^{\text {th }}$ June, 2022)

The prices of consumer goods and services rose 5.95 percent in the month of May compared to the same month of previous year. Food prices went up by 3.52 percent during the same period while non-food recorded higher increase at 8.05 percent. Non-food contributed to 71 percent of the total increase in May while food accounted for 29 percent of the inflation. Transport division continues to be the main driver with 15.46 percent increase followed clothing at 7.80 percent increase.

Month-on-month prices decreased by 0.50 percent from April to May due to drop in prices of food by 1.57 percent. Within food, prices decreased in May from previous month for vegetables by 1.98 percent mainly due to decrease in price of chilli; dairy products by 4.69 percent due to drop in egg price; and fruits by 3.37 percent. Non-food prices increased by 0.42 percent due to increase in prices of petrol, diesel, LPG and kerosene.

## Annual inflation rate

The prices of household goods and services increased by 7.35 percent from 2020 to 2021. This was an increase of 1.72 percentage point compared to 5.63 percent increase in 2020. The higher rate in 2021 was due to increase in the non-food by 5.62 percent compared to 1.24 percent increase in 2020.
Food prices contributed to about 60 percent of the overall inflation rate in 2021 and non-food contributing to 40 percent of the total increase. In 2020, food prices were the main driver of the inflation rate contributing to almost 90 percent of the total increase.
Among the 12 major division, food \& alcoholic beverages contributed to more than 50 percent of the total increase in 2021, followed by transport with about 15 percent and clothing \& footwear with about 11 percent contribution to the total increase.
Alcoholic beverages and betel nuts recorded the highest increase with 16.66 percent while education fees recorded the lowest increase with 0.66 percent in 2021. All other divisions recorded an increase except for communication which dropped by 9.90 percent.

Chart 5: Purchasing Power of Ngultrum (PPN)

The purchasing power of Ngultrum as measured by CPI is Nu. 60 as of May 2022 compared to December 2012. This means, Nu. 100 in May 2022 is worth only Nu. 60 at December 2012 prices. The Purchasing Power of Ngultrum as measured by CPI has dropped by 5.61 percent in the last one year (from May 2021 to May 2022) due to price increase in the economy.

## Technical notes

## Concept and Definition of CPI

The Consumer Price Index (CPI) is a measure of average price changes in the basket of goods and services purchased by households over time. It shows how much, on average, prices of goods and services have increased or decreased from a particular reference period, commonly known as the Index reference.

## Scope and coverage

The CPI covers the goods and services consumed by the households and a sample of goods and services are selected using the household expenditure data to measure the inflation experienced by the households. Prices of the sampled goods and services are collected from urban areas in 20 Dzongkhags on monthly, quarterly and annual frequency depending on the price volatility of the items. The outlets for data collection are selected based on purposive sampling considering the popularity of the outlet and availability of the items.
CPI baskets has a total of 113 items ( 314 varieties) classified according to Classification of Individual Consumption According to Purpose (COICOP). Total of about 450 outlets are selected for pricing.

## Weights

Weights reflect the relative importance or share of the individual item to the total consumption expenditures of the households. It determines the impact an individual item will have to the overall inflation. Weight for the current CPI is derived using the household consumption expenditure data from the Bhutan Living Standard Survey (BLSS) conducted every five years. The current weight is based on BLSS 2017.

## Price reference and index reference

Price reference is the period for which the prices are used as denominator for the index calculation. The price reference period for CPI is April 2019.
Index reference period is the period for which the index is set as 100 . The index reference period is April 2019.

## Index Calculation Formula

Geometric Modified Laspeyres formula is used to calculate the CPI:

$$
\begin{array}{ll}
P_{G Y o} & =\prod_{i=1}^{n}\left(\frac{\boldsymbol{P}_{i}^{t}}{\boldsymbol{P}_{i}^{0}}\right)^{s_{i}^{b}} \\
S_{i}^{b} & =\text { Expenditure Shares of the Base Period (weight from BLSS) } \\
P_{i}^{t} & =\text { Current Period Price } \\
P_{i}^{o} & =\text { Previous Period Price } \\
\left(\frac{P_{i}^{t}}{P_{I}^{o}}\right) & =\text { Price Relatives }
\end{array}
$$

## Calculating Percent Changes

Month-on-month percent change measures the average price change between current month and previous month and serves as useful indicator of short-term price movement.

Year-on-year percent change measures the average price change between the specific month with that of the same month of the previous year.

Following is an example of computing index point and percent changes:

- Index point change

All item price index 104.50
Less previous price index
101.25

Equals index point change
3.25

- Index percent change

Index point change
3.25

Divided by Previous Price Index
101.25

Equals
0.032

Result multiplied by 100
$0.032 \times 100$
Equals percent changes
3.2
