## Export and Import Price Index: Second Quarter (April- Jun), 2023

## Export Price Index

Year-on-year inflation for export goods further decreased in the Second quarter of 2023 compared to the second quarter of 2022 by 4.18 percent. The prices of food and beverage; increased by 1.66 percent. The prices for mineral products, cement and electricity; increased by 5.27 percent. The prices of wood, pulp and paper increased by 18.59 percent compared to the second quarter of 2022 . However the price for chemicals, plastics, textiles and apparels; decreased by 3.68 percent and the price of base metals and other manufactures decreased by 22.60 percent. The export prices of wood pulp and paper increased by 18.59 percent in present quarter as compared to the second quarter of 2022.

Quarter-on-quarter export price recorded a decrease in the second quarter. It went down by 1.43 percent. The decrease was mainly driven by the decrease in price of chemicals, plastics, textiles and apparel by 10.17 percent and the price of base metals and other manufactures decreased by 8.85 percent. The export prices decreased for wood, pulp and paper by 2.68 percent in the present quarter. On the other hand the price of food and beverage; price of mineral products, cement and electricity have increased.

## Import Price Index

The year-on-year inflation rate for imported goods recorded a decreased of 2.99 percent in the second quarter of 2023 as compared to second quarter of previous year (2022). All groups within the import category recorded decreased on year-on-year, Food and beverages group recorded decreased of 1.96 percent. The price metals and metal articles recorded a decrease of 10.04 percent. Mineral products, cement and electricity recorded decreased of 19.04 percent. The prices of chemicals, plastics, textiles and apparel increased by 9.46 percent followed by the increase in machinery, appliances and other manufactures by 7.30 percent respectively. The wood, pulp and paper decreased by 4.33 percent. The price for transport equipment; recorded decreased of 1.00 percent

The quarter-on-quarter (current quarter compared to previous quarter) import decreased by 1.11 percent, the contributors to the decline, in comparison to the previous quarter, are mineral products, cement and electricity which recorded a decline of 7.98 percent, metal and metal articles which recorded a decrease of 4.71 percent. Food and beverages also recorded an increase of 4.08 percent. Prices for chemicals, plastics, textiles and apparel decrease by 2.29 percent. The prices for the other categories of wood, pulp and paper; decreased by 10.77 percent and machinery, appliances and other manufactures; increased by 1.52 percent respectively and transport equipment decreased by 4.08 percent respectively.

Terms of Trade

The terms of trade further decreased to 87.93 in the second quarter from 87.71 in the first quarter of previous year, recording decrease by 0.28 percentage point. Compared to the second quarter of the previous year, the terms of trade decreased by 1.11 percent.

Increase in terms of trade means more quantity of imports that can be funded by a fixed quantity of exports while decrease in terms of trade means smaller quantity of imports that can be funded by a fixed quantity of exports.

## Technical note

Export and Import Price Index (XMPI) is a measure of average price change over the period for goods and services that are exported and imported. The export and import price index for Bhutan includes only the goods and excludes the services component.

The data for compilation of export and import price index are sourced from the Trade Statistics published by the Department of Revenue and Customs (DRC), Ministry of Finance. Prices for both export and import are based on FOB (Free-on-Board) values. Price for computation of index is based on unit value derived from the trade statistics. For electricity, data is sourced from the Druk Green Power Corporation.

US Import Price Index is used as proxy for import of machinery and equipment as the unit value based on trade statistics is not sufficiently reliable. The US import price index is adjusted for changes in exchange rate between the Ngultrum and the US dollar.

Items selection - Export and import baskets are updated annually using the annual trade statistics data. Selection of items for the basket are based on factors such as FOB values; quarterly unit values; coefficient of variation (CV); and count of number of quarters that unit values are present during the latest nine quarters.

For 2022 basket items, there are 43 items in the Export basket ( 36 items exported to India and 7 items exported to countries other than India) and 131 items in the Import basket ( 118 items imported from India and 13 items imported from countries other than India).

Terms of Trade - Terms of trade indexes measure the relative price of exports in terms of Import prices. It is calculated as the ratio of export prices to import prices and expressed in terms of 100. The terms of trade track the purchasing power of exports. It measures the changing quantity of imports that can be funded by a fixed quantity of exports. An increase in the terms of trade means that a larger quantity of imports can be funded by a fixed quantity of exports, while a decrease in the terms of trade means that a smaller quantity of imports can be funded by a fixed quantity of exports.

Frequency, timeline and revision - XMPI will be published on quarterly basis with a time lag of one quarter after the reference quarter. DRC provides provisional data for the first three quarters of the year and the finalized data for the year when providing the fourth quarter data. Hence, the index for the past three quarters may get revised when the final annual data is received.

Classification - Goods are classified using the Bhutan Trade Classification which is based on the International Harmonized System Classification

Weights - represents the relative importance of specific item to the overall exports or imports and determines the impact each item will have on the overall price change. Weights are updated annually along with annual basket selection.

Formula - Arithmetic Young upper-level formula is used to calculate the XMPI
