**Consumer Price Index (CPI): April 2024**

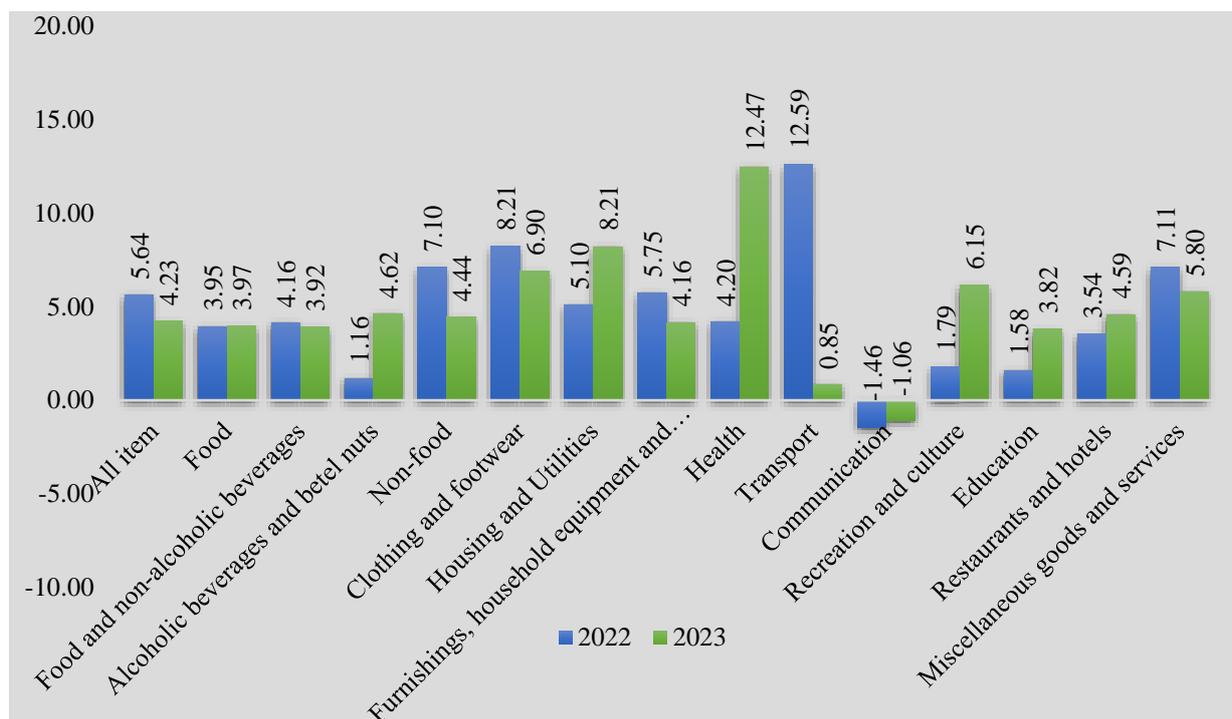

(Release date: 31<sup>st</sup> May, 2024)

Year-on-year CPI increased by 4.87 percent in April 2024 compared to last year. The food index increased by 5.53 percent and the non-food index increased by 4.31 percent. Except for the communication major divisions, there has been an increase in the indices for all major divisions. The index for communication decreased by 8.57. The index for miscellaneous goods and services increased by 8.34 percent and that for housing and utilities increased by 6.26 percent. The index for transport increased by 5.50 percent.

Month-on-month CPI in April 2024 increased by 1.50 percent from March 2024. The CPI of food increased by 0.62 percent and that of non-food increased by 2.26 percent. The index of housing and utilities increased by 6.99 percent and that of education increased by 3.91 percent. Food and non-alcoholic beverages index increased by 0.70 percent from March and alcoholic beverages and betel nuts decreased by 0.52 percent. There has been a decrease in the index of communication by 1.61 percent.

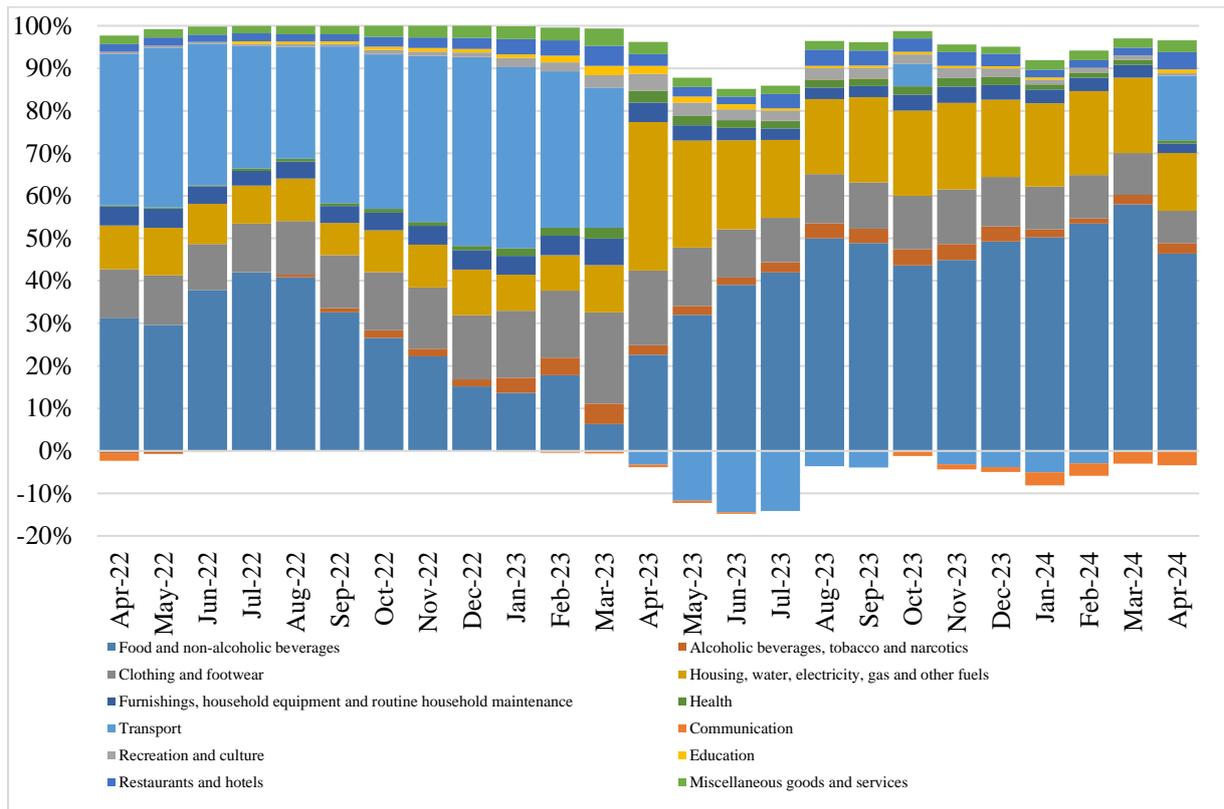

## Annual inflation rate

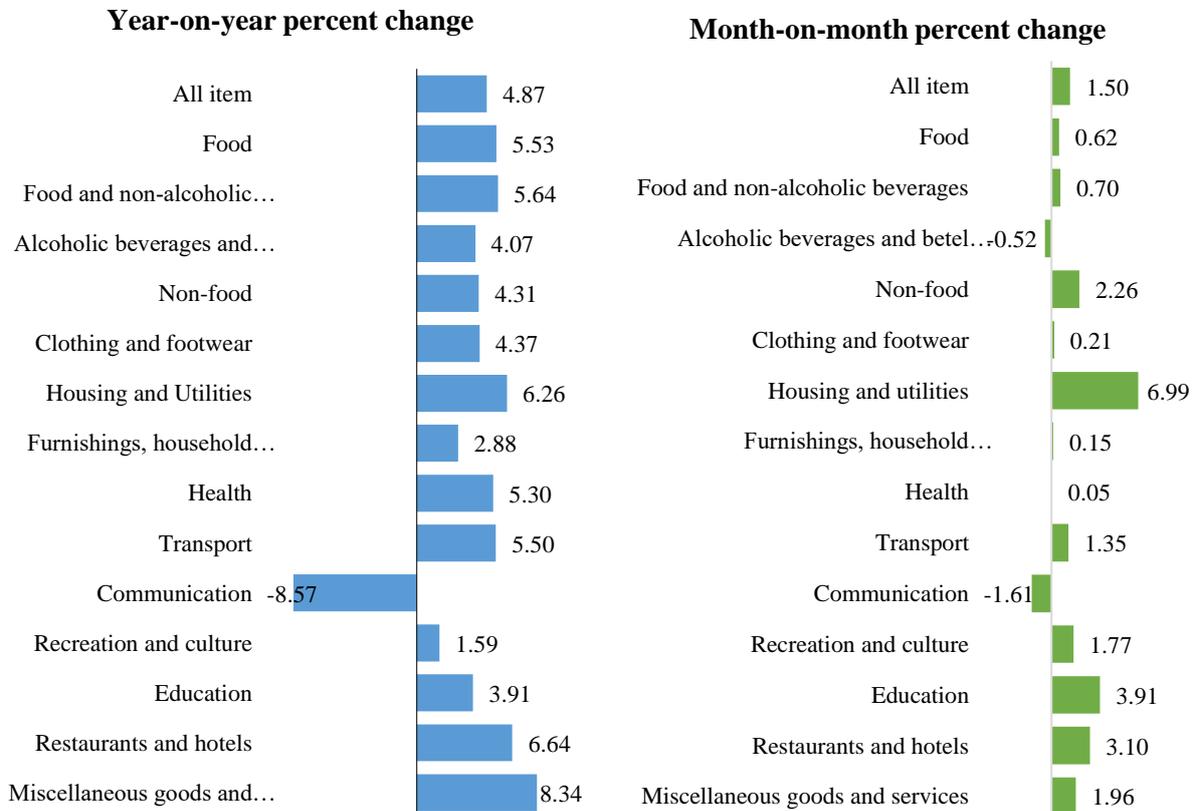

The prices of household goods and services increased by 4.23 percent from 2022 to 2023. This was a drop of 1.41 percentage points compared to a 5.64 percent increase in 2022. There was a lower rate of increase in the non-food items by 4.44 percent compared to a 7.10 percent increase in 2021.

In 2023, among the twelve major groups, health recorded the highest increase with 12.47 percent. The lowest increase was recorded for transport with 0.85 percent. Except for the index of communication, which decreased by 1.06 percent, the annual CPI for all other divisions increased. There is a noticeable increase in indices of food and non-alcoholic beverages, housing and utilities, health, recreation and culture, education, and even restaurants and hotels. The CPI for alcoholic beverages and betel nuts increased by 3.46 percentage points, and housing and utilities increased by 3.11 percentage points. The index for health increased by 8.27 percentage points and that of recreation and culture increased by 4.36 percentage points. Similarly, transport saw a huge decrease in the index by 11.74 percentage points from 2022 to 2023.

**Chart 5: Purchasing Power of Ngultrum (PPN)**

The purchasing power of Ngultrum as measured by CPI is Nu. 55.5 as of April 2024 compared to December 2012. This means, Nu. 100 in April 2024 is worth only Nu. 55.5 at December 2012 prices. The Purchasing Power of Ngultrum as measured by CPI has dropped by 4.64 percent in the last year (from April 2023 to April 2024) due to price increases in the economy.

## Technical notes

### Concept and Definition of CPI

The Consumer Price Index (CPI) is a measure of average price changes in the basket of goods and services purchased by households over time. It shows how much, on average, prices of goods and services have increased or decreased from a particular reference period, commonly known as the Index reference.

### Scope and Coverage

The CPI covers the goods and services consumed by the households and a sample of goods and services are selected using the household expenditure data to measure the inflation experienced by the households. Prices of the sampled goods and services are collected from urban areas in 20 Dzongkhags on monthly, quarterly, and annual frequency depending on the price volatility of the items. The outlets for data collection are selected based on purposive sampling considering the popularity of the outlet and availability of the items.

CPI basket has a total of 113 items (314 varieties) classified according to the Classification of Individual Consumption According to Purpose (COICOP). A total of about 450 outlets are selected for pricing.

### Weights

Weights reflect the relative importance or share of the individual item to the total consumption expenditures of the households. It determines the impact an individual item will have on the overall inflation. Weight for the current CPI is derived using the household consumption expenditure data from the Bhutan Living Standard Survey (BLSS) conducted every five years. The current weight is based on BLSS 2017.

### Price reference and index reference

Price reference is the period for which the prices are used as the denominator for the index calculation. The price reference period for CPI is April 2019.

The index reference period is the period for which the index is set as 100. The index reference period is April 2019.

### Index Calculation Formula

The Geometric Modified Young formula is used to calculate the CPI:

$$P_{GYO} = \prod_{i=1}^n \left( \frac{P_i^t}{P_i^o} \right)^{S_i^b}$$

$S_i^b$  = Expenditure Shares of the Base Period (weight from BLSS)

$P_i^t$  = Current Period Price

$P_i^o$  = Previous Period Price

$\left( \frac{P_i^t}{P_i^o} \right)$  = Price Relatives

## Calculating Percent Changes

Month-on-month percent change measures the average price change between the current month and the previous month and serves as a useful indicator of short-term price movement.

Year-on-year percent change measures the average price change between the specific months with that of the same month of the previous year.

Following is an example of computing index point and percent changes:

- Index point change

All item price index	104.50
Less previous price index	101.25
Equals index point change	3.25

- Index percent change

Index point change	3.25
Divided by Previous Price Index	101.25
Equals	0.032
Result multiplied by 100	0.032 x 100
Equals percent changes	3.2
