ROYAL GOVERNMENT OF BHUTAN
NATIONAL STATISTICS BUREAU

Export and Import Price Index: Fourth Quarter (January – March), 2026

1.1: Export Price Index

Year-on-year inflation for exported goods decreased to 2.06 percent in the First quarter of 2026 compared to the same period in 2025. The prices of food and beverages increased by 4.10 percent and the prices of mineral products, cement, and electricity decreased by 1.98 percent. Conversely the prices for chemicals, plastics, textiles, and apparel decreased by 5.51 percent. The prices of base metals and other manufactured goods saw a drop of 5.39 percent. On the other hand, the price of wood, pulp, and paper rose by 8.27 percent compared to the first quarter of 2025.

Figure 1.1: Export price index, Y-O-Y, and Q-O-Q percentage change

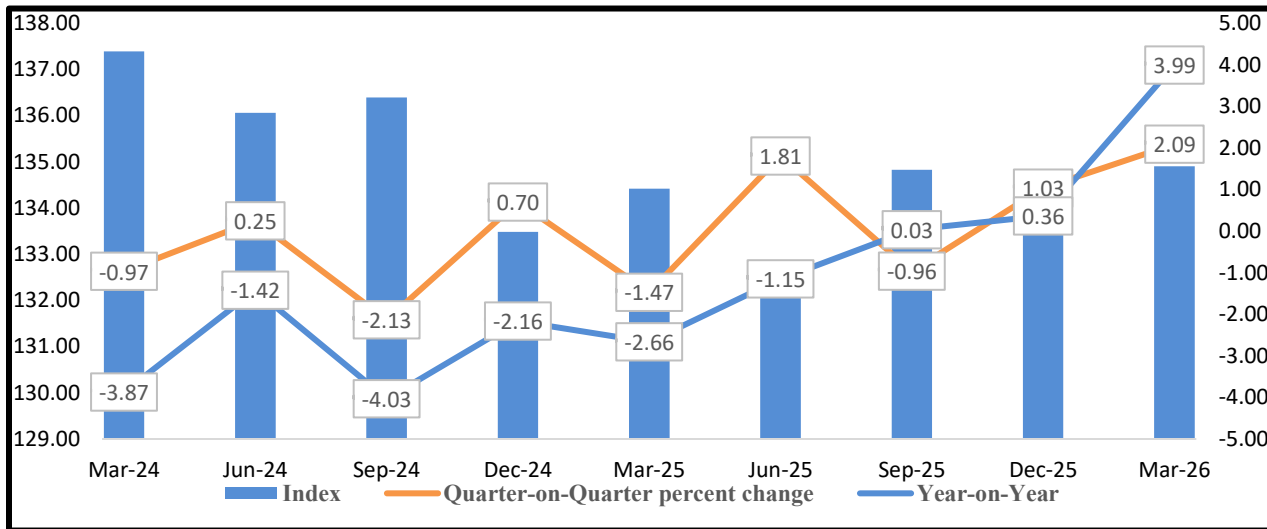

On a quarter-on-quarter basis, export prices decreased by 0.05 percent in the First quarter of 2026. This decrease was mainly driven by 2.43 percent decrease in the price of mineral products, cement, and electricity. Conversely, the prices the food and beverages increased by 1.99 percent. The prices for base metals and other manufactured goods increased by 2.57 percent. Additionally, the prices of wood, pulp, and paper decreased by 7.20 percent in the first quarter of 2026 compared to the previous quarter of the same year.

1.2: Import Price Index

The year-on-year inflation rate for imported goods increased to 3.99 percent in the first quarter of 2026, compared to the same period in 2025. Most categories within imports experienced price rise, while the prices for food and beverages decreased by 1.88 percent. Conversely, the Prices for wood, pulp, and paper increased by 10.09 percent. The prices of chemicals, plastics, textiles, and apparel increased by 9.43 percent. The metals and metal articles saw a high rise of 10.45 percent. Transport equipment prices increased by 14.05 percent, whereas machinery, appliances, and other manufactured goods experienced decrease of 2.20 percent.

Figure 1.2: Import price index, Y-O-Y, and Q-O-Q percentage change.

On a quarter-on-quarter basis, the inflation rate for imports increased to 2.09 percent in the First quarter of 2026 compared to the previous quarter. The prices of food and beverages decreased by 0.32 percent, and the prices for mineral products, cement, and electricity decreased by 0.84 percent. Additionally, the prices for transport equipment saw a slightly increase of 1.64 percent. The prices of wood, pulp, and paper increased by 5.70 percent. Additionally, the prices of metals and metal articles increased by 10.59 percent. The prices for machinery, appliances, and other manufactured goods, decreased by 1.52 percent.

1.3: Terms of Trade

The terms of trade decreased to 92.26 in the first quarter of 2026, from 94.24 in the fourth quarter of 2025, marking decrease of 2.09 percentage points. Compared to the first quarter of the previous year, the terms of trade decreased to 6.20 percent.

An increase in terms of trade means that a fixed quantity of exports can fund a larger quantity of imports. Conversely, a decrease in terms of trade means that the same quantity of exports can fund a smaller quantity of imports.

Technical note

Export and Import Price Index (XMPI) is a measure of average price change over the period for goods and services that are exported and imported. The export and import price index for Bhutan includes only the goods and excludes the services component.

The data for compilation of export and import price index are sourced from the Trade Statistics published by the Department of Revenue and Customs (DRC), Ministry of Finance. Prices for both export and import are based on FOB (Free-on-Board) values. Price for computation of index is based on unit value derived from the trade statistics. For electricity, data is sourced from the Druk Green Power Corporation.

US Import Price Index is used as proxy for import of machinery and equipment as the unit value based on trade statistics is not sufficiently reliable. The US import price index is adjusted for changes in exchange rate between the Ngultrum and the US dollar.

Items selection – Export and import baskets are updated annually using the annual trade statistics data. Selection of items for the basket are based on factors such as *FOB values; quarterly unit values; coefficient of variation (CV); and count of number of quarters that unit values are present during the latest nine quarters.*

For 2023 basket items, there are 43 items in the Export basket (36 items exported to India and 7 items exported to countries other than India) and 131 items in the Import basket (118 items imported from India and 13 items imported from countries other than India).

Terms of Trade - Terms of trade indexes measure the relative price of exports in terms of Import prices. It is calculated as the ratio of export prices to import prices and expressed in terms of 100. The terms of trade track the purchasing power of exports. It measures the changing quantity of imports that can be funded by a fixed quantity of exports. An increase in the terms of trade means that a larger quantity of imports can be funded by a fixed quantity of exports, while a decrease in the terms of trade means that a smaller quantity of imports can be funded by a fixed quantity of exports.

Frequency, timeline and revision - XMPI will be published on quarterly basis with a time lag of one quarter after the reference quarter. DRC provides provisional data for the first three quarters of the year and the finalized data for the year when providing the fourth quarter data. Hence, the index for the past three quarters may get revised when the final annual data is received.

Classification - Goods are classified using the Bhutan Trade Classification which is based on the International Harmonized System Classification

Weights - represents the relative importance of specific item to the overall exports or imports and determines the impact each item will have on the overall price change. Weights are updated annually along with annual basket selection.

Formula - Arithmetic Young upper-level formula is used to calculate the XMPI
