FOREWORD

National Statistics Bureau (NSB) is pleased to release the Consumer Price Index (CPI) Bulletin for April 2018. This is the 53rd series of monthly CPI Bulletin published by Economic and Environmental Statistics Division, NSB.

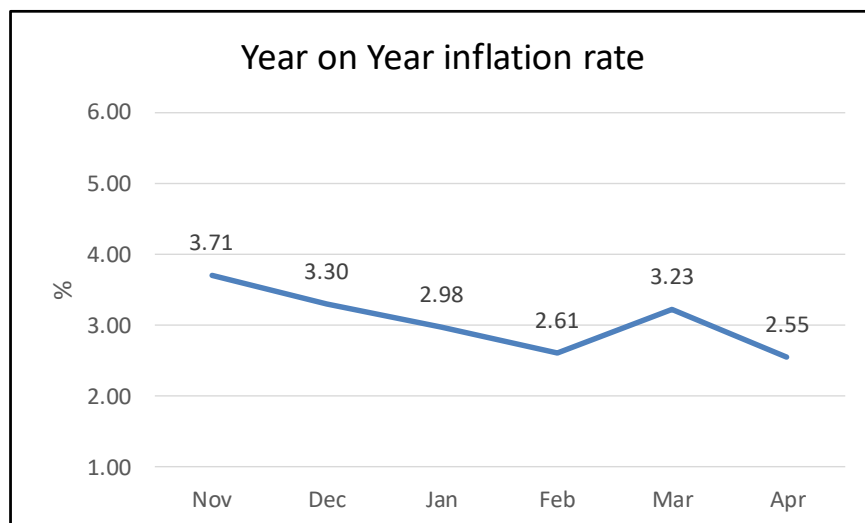

The Bulletin is compiled using December 2012 as the price reference period and tracks the price movements of 151 items in 20 districts and 2 major urban areas. The rebased CPI uses the Geometric Modified Laspeyres formula, and has separate indices for domestic and imported goods and services.

We thank all agencies and stakeholders for their support in bringing out this bulletin and look forward for their continued support.

May 2018

National Statistics Bureau

GRAPH 1: YEAR-ON-YEAR INFLATION

YEAR-ON-YEAR INFLATION RATE

The Consumer Price Index in April 2018 [i.e., from April 2017 to April 2018] increased by 2.55%. This was 0.68 percentage point lower than the previous month which was 3.23%. The lower rate was due to decrease in the rate of food prices which was 5.50% as compared to 7.83% in March. Non-food prices increased by 0.63% which was an increase of 0.35 percentage point as compared to 0.28% in March.

The prices of local goods and services recorded an increase of 1.59% in April with corresponding increase in food prices by 4.04% which was a 50% drop in the rate compared to March. Non-food prices increased by 0.17% only.

Prices of imported goods and services recorded higher increase at 3.44% as compared to 3.31% in March. This was due to increase in non-food by 1.09%, higher by 0.63 percentage point from previous month while food prices recorded 6.69% increase.

GRAPH 2: MONTH-TO-MONTH INFLATION RATE (OVERALL, DOMESTIC AND IMPORTED)

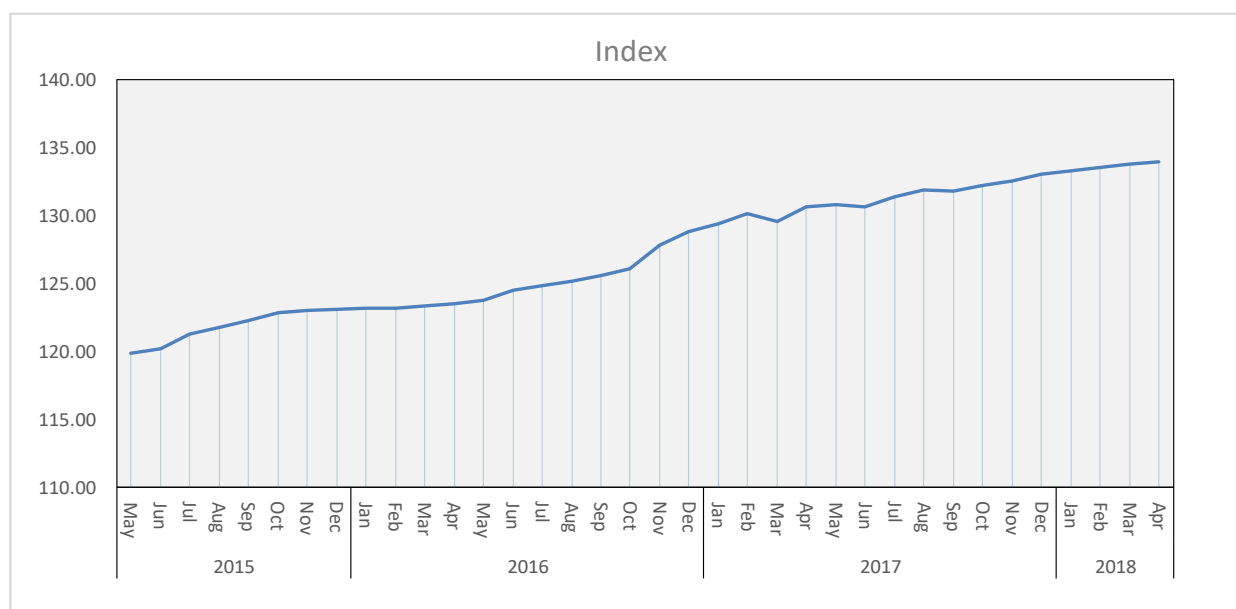

MONTH-TO-MONTH INFLATION RATE

The CPI for April over previous month of March recorded same increase as in March with 0.14% which was due to increase in non-food prices by 0.32% while food prices dropped by 0.12%.

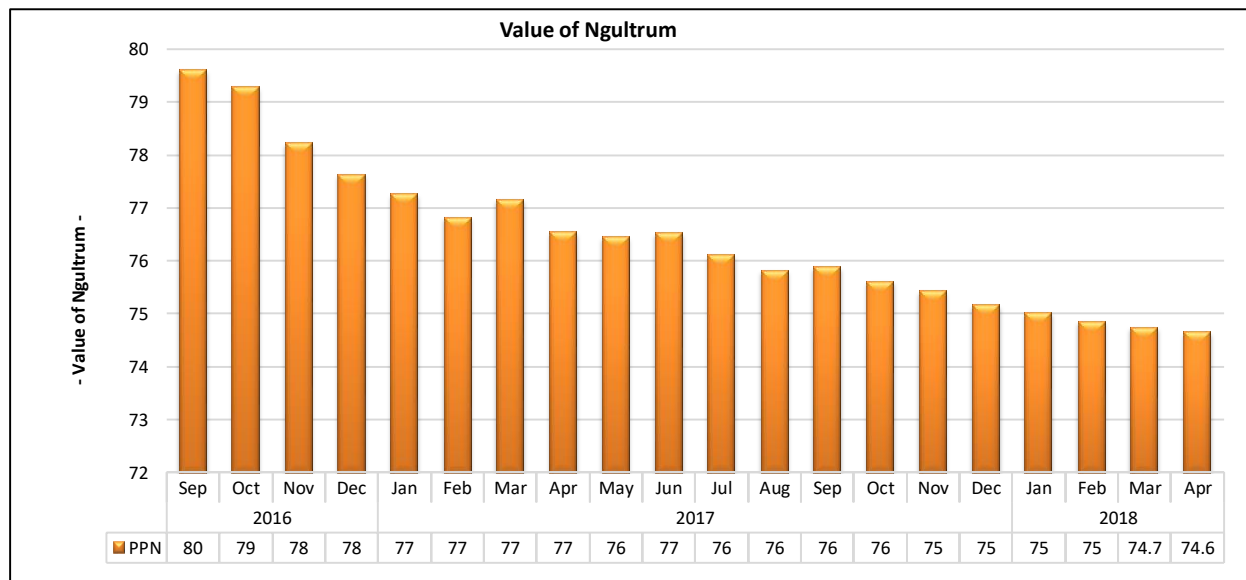

Prices of local goods and services dropped in April by 0.08% due to drop in food prices by 0.35%, while minimal increase of 0.08% was recorded in non-food prices.

Imported commodities increased by 0.35% over March with increase in both food and non-food prices by 0.07% and 0.56% respectively.

GRAPH 3: TIME SERIES INDEX LEVEL TREND

GRAPH 4: PURCHASING POWER OF NGULTRUM (PPN)

The PPN, as measured by CPI was 75 Ngultrum as of April 2018. This means, Ngultrum 100 in April 2018 is worth only Ngultrum 75 at December 2012 prices. The PPN has decreased by 2.48% in the past 12 months (i.e. from April 2017 to April 2018) due to price increase in the economy.

TECHNICAL NOTES

1. Concept and Definition of CPI

The Consumer Price Index (CPI) is a measure of changes in the average retail prices of a market basket of goods and services purchased by households for day-to-day living. It shows how much, on average, prices of goods and services have increased or decreased from a particular reference period, commonly known as the base period.

2. Uses of CPI

- ✓ As an economic indicator: - CPI is one of the major indicators that determine the effectiveness of an economic policy. It is used to formulate fiscal and monetary policies and monitor their effect on the overall economy. Business executives, labor leaders, and other private citizens use CPI as a guide to make economic decisions.
- ✓ As a means of adjusting income payments: -Many collective bargaining agreements use CPI to determine wage rates, and index various payments to adjust the effects of inflation.
- ✓ As a deflator of economic series: - CPI or its components is used as a deflator to adjust for price changes in various economic data series (e.g., GDP).

3. Weights

The weights reflect the relative importance or contribution to the total consumption expenditures of all households. It is determined using the spending patterns of households during some previous weight reference period.

It is important for the weights to reflect the current consumption patterns of the household. The more current the weights, the more reflective they are of current consumer spending patterns. The international standards recommend rebasing CPI every 5 years.

The current CPI weights were updated in 2012 following the conduct of the Bhutan Living Standard Survey (BLSS) in March – May 2012. Expenditure details were broken down into imported and domestic goods to facilitate calculation of domestic and imported inflation.

4. Reference Period

There is no single “base period” for a price index. It can mean different things to different users. In practice, there are three “reference periods” used.

- ✓ Weight Reference Period is the period during which household consumption values are collected. The weight-reference period for the new rebased CPI is 2012, that is, the period when the BLSS was conducted.
- ✓ Index Reference Period is the period when the index is set to 100. In the new CPI, the index reference period is December 2012.
- ✓ Price Reference Period is the period of the first price of each product used to calculate the elementary indices (indices for individual CPI items). The price reference period for the new CPI is the fourth Quarter 2012.

5. Index Calculation Formula

Geometric Modified Laspeyres formula is used to calculate the CPI:

$$P_{GYo} = \prod_{i=1}^n \left(\frac{P_i^t}{P_i^0} \right)^{S_i^b}$$

S_i^b = Expenditure Shares of the Base Period (weight from BLSS)

P_i^t = Current Period Price

P_i^0 = Previous Period Price

$\left(\frac{P_i^t}{P_i^0} \right)$ = Price Relatives

6. Market Basket

Market basket refers to a sample of goods and services which is representative of all goods and services purchased by the households. The present market basket has 151 items (436 varieties) compared to 80 items (363 varieties) in the previous CPI basket. The new re-based CPI uses the Classification of Individual Consumption According to Purpose (COICOP). The 12 major groups are:

1. Food and Non-Alcoholics Beverages;
2. Alcoholic Beverages & Narcotics;

3. Clothing and Footwear;
4. Housing, Water, Electricity, Gas and Other Fuels;
5. Furnishing, Household Equipment and Routine Household Maintenance;
6. Health;
7. Transport;
8. Communication;
9. Recreation and Culture;
10. Education;
11. Restaurant and Hotels;
12. Miscellaneous Goods and Services.

7. Sample Outlets

Sample outlets are permanent establishments or retail shops from which monthly price of goods and services are collected or quoted. These include groceries, clothing and footwear, restaurants, hardware shops, vegetable vendors and service providers etc. The outlets are selected based on a set of pre-determined criteria. For current CPI, prices are collected from a sample of 557 outlets. Special procedures are applied to replace the outlets or the items, if they are no longer available or sold by the outlet.

8. Data Collection Method

Prices are collected online from the sampled outlets by price collectors using mobile application devices once every month.
