I take immense pleasure in presenting the 2017 Population and Housing Census of Bhutan (PHCB) Dzongkhag Report. The Report contains information on population by age, sex, educational attainment, migration, fertility, disability, mortality, housing amenities, assets, and employment at the Dzongkhag/Thromde and Gewog levels.

The 2017 PHCB was conducted from 30 May to 01 June 2017 using the de facto approach. Extensive efforts have been made to successfully undertake this nationwide census. It involved meticulous planning and systematic preparation in all stages, ranging from stakeholder meetings, questionnaire design, testing of questionnaire, preparation of enumerator and supervisor's manuals, training of trainers, training of enumerators and supervisors, field enumeration, data entry and processing, and analyses and report writing. I commend the hard work and persistent efforts put in by the National Statistics Bureau in successfully completing these processes.

Every country strives to achieve higher socio-economic growth and human development. In order to bring about holistic development, reliable information on the population of the country is required. The Population and Housing Census provides an important dataset that helps us understand changes and trends in population dynamics which are crucial for informed

## FOREWORD

decision-making at all-levels, both in the public and private sectors.

I am hopeful that the information in this Report would prove useful for evidence based decision-making and formulation of policies and plans. Both the national and local governments could use the census information to define service areas, identify current requirement of services and infrastructure, and predict future demands. Further, it would serve as the basis for measuring progress towards the achievement of key national as well as other time-bound targets in the country.

I would like to express my sincere gratitude and appreciation to all officials in the Dzongkhags and Thromdes for their active participation and for contributing towards the successful execution of the 2017 PHCB. I would also like to thank the general public for the overwhelming support and cooperation extended to the census officials during the 2017 PHCB field enumeration period from 30 May to 01 June 2017.

(Sonam Topgay)
Vice Chairman
National Census Steering Committee
Royal Government of Bhutan

## ACKNOWLEDGEMENT

The 2017 Population and Housing Census of Bhutan (PHCB) entailed nationwide collaboration and coordination. The National Census Secretariat, instituted at the National Statistics Bureau (NSB), would like to take this opportunity to express our sincere gratitude to all the agencies and individuals who contributed to the success of the Census.

We are truly indebted to the Honourable Prime Minister for his steadfast support and the Royal Government of Bhutan for funding the 2017 PHCB in its entirety. We would also like to express our sincerest gratitude to the Honourable members of the National Census Steering Committee (NCSC) for their invaluable counsel, guidance, and support during the implementation of the Census. The NCSC's role in the successful execution of the 2017 PHCB cannot be overstated.

Next, we would like to convey our sincere appreciation to the ministries, governmental and non-governmental agencies, and the Dzongkhag/Thromde Administrations for their cooperation and inputs. We are further grateful to the Dasho Dzongdas of the 20 Dzongkhags and Dasho Thrompons of the four Thromdes for their support and leadership in ensuring the successful completion of the censuses in their respective Dzongkhags and Thromdes. We would like to thank the Royal Bhutan Police for arranging security services during the enumeration process and the electronic and print media for their coverage and dissemination of information on the 2017 PHCB.

We also wish to acknowledge and earnestly thank the 9,750 enumerators and supervisors for their hard and sincere work. The commitment shown by the supervisors and enumerators, who worked from the early hours of the morning till late in the evening during the census enumeration period, are exemplary and truly deserving of our utmost appreciation.

Most importantly, we would like to sincerely thank the people of Bhutan for the unprecedented support and cooperation extended to the census officials during the enumeration. The enthusiastic support shown by the public makes us believe that the public understands the importance of the Census, making our task most gratifying.

Finally, I wish to express my sincere appreciation and gratitude to all my colleagues at the NSB and our Dzongkhag Statistical Officers for their remarkable efforts, commitment, and dedication to the service of the Tsa-Wa-Sum.

(Chhime Tshering)
Census Commissioner
National Census Secretariat
National Statistics Bureau
Royal Government of Bhutan

## SUMMARY TABLE OF KEY FINDINGS

| Topic | Indicator | 2017 |

## Section 1: INTRODUCTION

### 1.1 Background

The overall objective of the 2017 Population and Housing Census of Bhutan (PHCB) is to provide the Government and other development partners with data for the purposes of policy formulation, socio-economic planning, service delivery, and indicators for measuring progress towards the achievement of key government as well as other time-bound targets. In addition, the data collected through the Census are intended to be used for monitoring national and international development initiatives, including sectoral development plans, the Sustainable Development Goals (SDGs), and the International Conference on Population and Development (ICPD).

The Census is an important source of benchmark information on the characteristics of the population and households at the Dzongkhag and Gewog levels. Disaggregated data are vital for development planning and
evidence-based decision-making at the lower administrative levels. Crucially, Dzongkhag data can be used for the allocation of resources, positioning of social infrastructures and services, research, and policy analyses.

This Report presents information on population, household characteristics, and housing conditions of Trashi Yangtse Dzongkhag. Population characteristics include spatial distribution of the population, age and sex composition, dependency, education and literacy, health, disability, labour and unemployment, and migration. Household characteristics and housing conditions include socio-economic amenities available to households, quality of housing, and food sufficiency.

### 1.2 Legal Basis

In the absence of an act related to population and housing census, the Royal Government of Bhutan issued a Government Order to carry out the 2017

PHCB. In accordance with the Executive Order, the National Census Secretariat (NCS) was established at the National Statistics Bureau (NSB) and National Census Steering Committee (NCSC) was instituted to provide overall policy guidance and advice on the conduct of the 2017 PHCB.

### 1.3 Administrative set up at the Dzongkhag/Thromde level

In order to execute the census operations on the ground, the Dzongkhag Census Committee (DCC) and Thromde Census

Committee (TCC) were instituted at the Dzongkhag and Thromde levels respectively with different sector heads as their members. The Dasho Dzongdas/ Thrompons served as the chairpersons of the DCCs/TCCs to oversee the successful conduct of the census operation within their respective Dzongkhags and Thromdes. The DCC/TCC was also responsible for recruiting supervisors and enumerators for their respective Dzongkhags/Thromdes, conducting training, and carrying out field enumeration.

## Section 2: DEMOGRAPHIC CHARACTERISTICS

## Introduction

Population is the most important resource of any nation. Data on population size, age structure, characteristics, and spatial distribution in a well-defined territory is a basis for plan formulation, resource allocation, and good governance.

It is important to examine and understand the population dynamics within each Dzongkhag to effect specific and proper planning. The 2017 PHCB collected data on important demographic characteristics such as age, sex, marital status, etc.

This section provides a brief analysis of the 2017 PHCB data on population size or the number of people residing in Trashi Yangtse Dzongkhag as of the census reference day. It also looks at the distribution of the population by gewog and town and place of residence (urban \& rural). In addition to the size and
distribution of the population, this section presents a brief analysis of changes in such parameters by comparing results from the 2017 PHCB to that of the 2005 PHCB.

### 2.1 Concepts and Definition

A population census is the total process of collecting, compiling, evaluating, analysing, and publishing or otherwise disseminating demographic, economic, and social data pertaining, at a specified time, to all persons in a country or in a well-delimited part of a country. The essential features of a population census are individual enumeration, universality within a defined territory, simultaneity, and defined periodicity ${ }^{1}$.

The 2017 PHCB was conducted from 30 May to 01 June 2017. The reference time and date for the census enumeration was midnight of 29 May 2017. This

[^0]Table 2.1 Distribution of Population by Gewog/ Town and Sex, Trashi Yangtse 2017

|  | Persons |  |  |
| :--- | ---: | ---: | ---: |
| Gewog/Town | Male | Female | Total |
| Urban |  |  |  |
| Trashi Yangtse Town | 1,661 | 1,526 | 3,187 |
| Duksum Town | 226 | 134 | 360 |
| Rural |  |  |  |
| Boomdeling | 1,043 | 1,099 | 2,142 |
| Jamkhar | 516 | 483 | 999 |
| Tongmajangsa | 890 | 892 | 1,782 |
| Yangtse | 684 | 669 | 1,353 |
| Ramjar | 624 | 589 | 1,213 |
| Khamdang | 1,644 | 1,668 | 3,312 |
| Toedtsho | 744 | 836 | 1,580 |
| Yalang | 687 | 685 | 1,372 |
| Total | 8,719 | 8,581 | 17,300 |

means that the 2017 PHCB provides population data of Trashi Yangtse as of 00:00 hours on 30th May 2017.

The 2017 PHCB was conducted based on the de-facto method of enumeration (enumeration is done on the basis of where a person is found at the census moment) though in some isolated cases, a combination of the de-facto and de-jure methods was also adopted.

### 2.2 Population of Trashi Yangtse

The total population of Trashi Yangtse Dzongkhag as of 30 May 2017 is 17,300 persons (Annex Table A2.1). This is the total number of people found within the territory of Trashi Yangtse on the census reference day irrespective of their nationality. Of the total, 17,300 persons, 8,719 persons ( $50.4 \%$ ) are males and 8,581 persons (49.6\%) are females. The total population of Trashi Yangtse

Dzongkhag represents 2.4 \% of the total population of Bhutan.

### 2.3 Size and Change of Population

Trashi Yangtse Dzongkhag has experienced a decrease in population size by about 440 persons during the intercensal period, a decrease by about $2.5 \%$ between 2005 and 2017.The population of Trashi Yangtse Dzongkhag in 2005 was 17,740 persons.

Trashi Yangtse Dzongkhag ranks fourth lowest in population size in the country, while Gasa Dzongkhag with just a little over 3,952 persons is the lowest.

### 2.4 Population by Area

In 2017, for every 100 persons in the Dzongkhag, 80 persons lived in rural areas, while 20 persons lived in urban areas (Figure 2.1). At the national level, $62.2 \%$ of the total population live in rural areas, while $37.8 \%$ live in urban areas. The proportion of urban population in Trashi Yangtse Dzongkhag is 20.5\%, which is an increase of 3.5 percentage points from the 2005 PHCB.

### 2.5 Sex Ratio

Sex ratios of a population vary depending on age. In general, at birth, the sex ratio is normally high as there are more boys than girls born each year. As this population grows older, sex ratio changes because males and females have different exposures to risks of dying.

Figure 2.1 Population by Area of Residence, Trashi Yangtse 2017

The male population of Trashi Yangtse Dzongkhag exceeds the female population by 138 persons. The sex ratio of the Trashi Yangtse (number of males for every 100 females) is 101.6 , which is lower than the national sex ratio of 109.7.

### 2.6 Population by selected Broad Age groups

The population can be divided into three broad age groups; those less than 15 years (child population), 15-64 years (productive population), and 65 years and over (elderly population). The distribution of population among these age groups shows that for Trashi Yangtse Dzongkhag, the child population is

5,582 persons, the productive population is 10,498 persons, while the elderly population is 1,220 persons.

The proportions of population in these broad age groups have significantly changed between 2005 and 2017. The proportion of child population has decreased to $32.3 \%$ from $36.3 \%$, while the productive population has increased to $60.7 \%$ from $58.3 \%$ and the elderly population to $7.1 \%$ from $5.4 \%$ during the same period.

### 2.7 Dependency Ratio

Dependency ratio is an indicator of the economic burden for the care of dependents and is calculated by taking the ratio of the number of dependents to the number of working-age population. 'Dependents' include the children (aged less than 15 years) and the elderly (65 years and over). The total dependency ratio is the sum of the child and old age dependency ratios.

The total and child dependency ratios for Trashi Yangtse Dzongkhag in 2017 have fallen from 71.6 and 62.3 in 2005 to 64.8 and 53.2 in 2017, while the age dependency ratio has increased from 9.3 in 2005 to 11.6 in 2017. The decline in dependency ratio reflects an increase in the size of the economically active cohort and a decline in the children-infant category (Table A2.3).

The period when the dependency ratio declines is known as the 'window of opportunity' when a 'demographic
dividend' may be reaped because society has a growing number of potential producers relative to the number of consumers. However, as fertility levels continue to decline, dependency ratios eventually increase because the proportion of working age starts to decline and the proportion of older persons continues to increase.

### 2.8 Population Age-Sex Pyramid

Population pyramid is a graphical presentation of age and sex composition of a population. It is a reflection of the past and current fertility patterns. Trashi Yangtse Dzongkhag has a largely young population although a gradual decline in fertility rates is observed in 2017. The
length of each bar in the pyramid shows the number of population in each age group. With advancing age, the length of bar becomes shorter as compared to the base of the pyramid, which is a usual trend. The declining bar at the base indicates declining fertility rates in the population, while elongated bars at the top indicate increasing life expectancy. The population pyramid of Trashi Yangtse Dzongkhag shows a consistent decline in fertility rates over time.

Compared to 2005 (shaded portion), Trashi Yangtse Dzongkhag in 2017 has experienced a decline in its population in the ages between 0-4 and 20-24 years for both sexes. Drastic decrease in the number of births during the intercensal

Figure 2.2 Age Sex Structure of Population, Trashi Yangtse 2005 and 2017

is observed. However, there is a slight increase in the number of population between ages 25-29 and 40-44 years for both sexes in 2017. The proportion of population living beyond 75 years has increased by about 0.9 percentage points between 2005 and 2017.

Figure 2.2 illustrates the differences between the shapes of the population pyramids and the age-sex structure of the population of Trashi Yangtse Dzongkhag between 2005 and 2017.

### 2.9 Population by Type of Household

To ensure complete coverage, three types of households were considered: regular households; institutional households; and transient population. These different types of households are defined as follows:

1. Regular household consists of a single or a combined household;

- A single household is defined as a household in which all its members occupy a single house.
- A combined household is defined as a household in which its members are lodged in rooms located in two or more buildings. A combined household can occur if a household has members eating in one place but has another apartment or census house used by the household.

2. Institutional household consists of a group of persons who live in an institution, having common arrangement

Figure 2.3 Population by Type of Household, Trashi Yangtse 2005 and 2017

of food or taking their food from a common kitchen.
3. Transient population includes persons on transit or enroute to a certain destination, e.g. persons who stayed on census night in airports, bus stands, vehicles, and persons travelling on foot (trekkers).

Figure 2.3 shows that there were a total of 14,554 persons ( $84.1 \%$ ) living in regular households, 2,632 persons (15.2\%) in institutional households, while 114 persons ( $0.7 \%$ ) were transient population. Compared to 2005, the number of regular household population has decreased by about 7.7 percentage points, while the institutional and
transient populations have increased by about 7.3 and 0.4 percentage points respectively in 2017 (Annex Table A2.4).

Of the total regular household population, 2,716 persons (18.7\%) live in urban areas, while 11,838 persons (81.3\%) live in rural areas. Of the two towns in Trashi Yangtse Dzongkhag, Trashi Yangtse Town with 2,438 persons (89.8\%) has the majority of the total regular household population, while Duksum Town has 278 persons (10.2\%).

Among the gewogs, Khamdang Gewog has the highest number of regular household population with 2,800 persons (23.7\%), closely followed by Boomdeling Gewog and Toedtsho Gewog with 1,796 persons (15.2\%) and 1,90 persons ( $12.6 \%$ ) respectively. Ramjar Gewog with 950 persons (8.0\%) has the lowest number of regular household population in the Trashi Yangtse Dzongkhag.

In terms of institutional population, Khamdang Gewog has the highest numberof people with 512 persons (26.8\%), followed by Tongmajangsa Gewog and Boomdeling Gewog with 497 and 346 persons respectively. Among the towns, Trashi Yangtse Town alone accounts for $93 \%$ of the total urban institutional population with 668 persons.

### 2.10 Bhutanese and NonBhutanese Population

The total Bhutanese population in Trashi Yangtse Dzongkhag as of 30 May 2017 is 16,930 persons (Table 2.2). Of the total, 8,360 persons are males and 8,570 persons are females. Across the Dzongkhag, 3,456 persons live in urban area and 13,474 persons in rural area. The total number of non-Bhutanese population in Trashi Yangtse Dzongkhag is 370 persons.

Table 2.2 Distribution of Bhutanese Population by Sex and Gewog/Town, Trashi Yangtse 2017

|  | Number of Persons |  |  |  | Percent |  |  |  |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: | :---: |
| Gewog/Town | Male | Female | Total | Male | Female | Total | Sex Ratio |  |

## Section 3: EDUCATION

## Introduction

The 2017 Population and Housing Census of Bhutan (2017 PHCB) collected information on literacy for all population aged 6 years and above and educational attainment for all population aged 3 years and above. The highest level of education completed was collected for all population who are currently attending school/ institute or had attended in the past. In addition, information on attendance of traditional learning was collected.

### 3.1 Literacy

Literacy is defined as the ability to read and write a short text in Dzongkha, English, Lhotshamkha, or any other language, while literacy rate is defined as the ratio of literate population aged 6 years and above to the total population of the same age group expressed in percentage. Out of 15,354 population aged 6 years and above, 25 persons had not responded to literacy questions. The literacy rate for the Dzongkhag is, therefore, based on a
total population of 15,329 persons. The 2017 PHCB reveals that 10,118 persons are literate, representing a literacy rate of $66.0 \%$ for the Dzongkhag (Figure 3.1). The adult (aged 15 years and above) literacy rate is $57.7 \%$.

Figure 3.1 Literacy Rate by Sex and Area, Trashi Yangtse 2017

Table 3.1 School Attendance for Persons Aged 6 Years and Above by Age Group, Trashi Yangtse 2017

| School Attendance | Population (6 Years and Above) | Age Group in Years |  |  |  |  |  | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 6-12 | 13-14 | 15-16 | 17-18 | 19-22 | 23 and Above |  |
| Total Population | 15,329 | 2,807 | 829 | 832 | 664 | 946 | 9,251 | 100.0\% |
| Currently Attending | 5,237 | 94.8\% | 92.8\% | 91.2\% | 82.7\% | 34.8\% | 1.8\% | 34.2\% |
| Previously Attended | 3,727 | 0.9\% | 4.8\% | 6.1\% | 14.2\% | 49.3\% | 33.0\% | 24.3\% |
| Never Attended | 6,365 | 4.3\% | 2.4\% | 2.6\% | 3.2\% | 16.0\% | 65.2\% | 41.5\% |

There is marked difference in the literacy levels between the male and female populations with $72.6 \%$ of the male population literate as compared to $59.3 \%$ of the female population. The trend is similar in both urban and rural areas though the disparity is slightly larger in rural areas at 13.3 percentage points as compared to 11.0 percentage points in urban areas. Overall, the literacy level is substantially higher in urban areas (82.3\%) than in rural areas (61.8\%).

The literacy rate in Trashi Yangtse Dzongkhag has increased by 11.0 percentage points, from $55.0 \%$ in 2005 to $66.0 \%$ in 2017.

### 3.2 School Attendance

The official entry age for primary education is 6 years. The overall status of school attendance by age group in Trashi Yangtse Dzongkhag is summarized in Table 3.1. Out of 15,354 persons aged 6 years and above, 25 persons had not responded to questions on the status of school attendance. The percentage of population under each category of school attendance is, therefore, based on 15,329 persons. Of these, $34.2 \%$ are currently attending school/institute, $24.3 \%$
had attended in the past, and $41.5 \%$ have never attended school/institute.

Across the age groups, the highest proportion of population currently attending school/institute is observed in the age group 6-12 years. More than half ( $65.2 \%$ ) of population aged 23 years and above had never attended school/ institute. The proportion of population currently attending school/institute is relatively higher in urban areas (41.7\%) as compared to $32.2 \%$ in rural areas (Annex Table A3.2.). 35.3\% of the female population are currently attending school/institute as compared to $33.0 \%$ of male population.

Figure 3.2 shows the comparison of school attendance between the 2005 and 2017 PHCB for all persons aged 6 years and above. The proportions of population aged 6 years and above who are currently attending school/institute and those who had attended in the past have increased by 2.2 and 11.8 percentage points respectively. In 12 years, the drop in the proportion of population who had never attended school/institute is 14.1 percentage points, a decline from $55.6 \%$ in 2005 to $41.5 \%$ in 2017.

Table 3.2 Population 6 Years and Above by Highest Level of Education Completed, Sex and Area, Trashi Yangtse 2017

| Highest Level of Education Completed | Population | Urban |  |  | Rural |  |  | Both Areas |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Male | Female | Total | Male | Female | Total | Male | Female | Total |
| Total Population | 8,964 | 1,339 | 1,089 | 2,428 | 3,361 | 3,175 | 6,536 | 4,700 | 4,264 | 100.0\% |
| Non-formal Education | 524 | 1.1\% | 6.5\% | 3.5\% | 4.0\% | 9.6\% | 6.7\% | 3.1\% | 8.8\% | 5.8\% |
| ECCD/Daycare | 36 | 0.2\% | 0.2\% | 0.2\% | 0.5\% | 0.4\% | 0.5\% | 0.4\% | 0.4\% | 0.4\% |
| Primary | 4,212 | 35.0\% | 28.8\% | 32.2\% | 52.5\% | 52.4\% | 52.5\% | 47.5\% | 46.4\% | 47.0\% |
| Lower Secondary | 1,215 | 10.2\% | 11.4\% | 10.7\% | 14.2\% | 15.0\% | 14.6\% | 13.1\% | 14.1\% | 13.6\% |
| Middle Secondary | 1,262 | 18.4\% | 23.5\% | 20.7\% | 11.1\% | 12.2\% | 11.6\% | 13.2\% | 15.1\% | 14.1\% |
| Higher Secondary | 806 | 14.0\% | 18.7\% | 16.1\% | 6.4\% | 6.3\% | 6.3\% | 8.6\% | 9.5\% | 9.0\% |
| Certificates | 177 | 7.5\% | 3.8\% | 5.8\% | 0.7\% | 0.4\% | 0.6\% | 2.6\% | 1.3\% | 2.0\% |

| Bachelor's Degree | 511 | 8.1\% | 4.4\% | 6.4\% | 7.7\% | 3.1\% | 5.4\% | 7.8\% | 3.4\% | 5.7\% |
| Masters and Above | 70 | 1.5\% | 0.5\% | 1.0\% | 1.2\% | 0.2\% | 0.7\% | 1.3\% | 0.2\% | 0.8\% |
| Others | 23 | 0.2\% | 0.6\% | 0.4\% | 0.3\% | 0.1\% | 0.2\% | 0.3\% | 0.2\% | 0.3\% |

Figure 3.2 School Attendance for Persons Aged 6 Years and Above, Trashi Yangtse 2005 and 2017

### 3.3 Educational Attainment

The 2017 PHCB collected information on the highest level of education completed for all population aged 3 years and above if the person is currently attending school/institute or had attended in the past.

Table 3.2 shows the distribution of population 6 years and above by the highest level of education completed ${ }^{2}$ in Trashi Yangtse Dzongkhag. Out of the
total population of 8,964 persons who are currently attending school/institute or had attended in the past, 4,212 persons have completed grades between $0^{3}$ to 6 (primary), 1,215 persons have completed grades between 7 to 8 (lower secondary), 1,262 persons have completed grades between 9 to 10 (middle secondary), and 806 persons have completed grades between 11 to 12 (higher secondary). Only 70 persons have completed their master's degrees and above and 511 persons have completed their bachelor's degrees.

Among those who have completed some level of education, the highest proportions of population have completed the primary level (47.0\%), followed by middle secondary level (14.1\%). About 1.0\% have completed their master's degrees and above and $5.7 \%$ have completed their bachelor's degrees.

[^1]Table 3.3 Population 6 Years and Above by Attendance of Traditional Learning, Sex and Area, Trashi Yangtse 2017

| Traditional Learning | Population | Urban |  |  | Rural |  |  | Both Areas |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Male | Female | Total | Male | Female | Total | Male | Female | Total |
| Total Population | 680 | 116 | 3 | 119 | 537 | 24 | 561 | 653 | 27 | 100.0\% |
| Monastic Public | 144 | 66.4\% | 0.0\% | 64.7\% | 11.9\% | 12.5\% | 11.9\% | 21.6\% | 11.1\% | 21.2\% |
| Monastic Private | 159 | 6.9\% | 33.3\% | 7.6\% | 27.2\% | 16.7\% | 26.7\% | 23.6\% | 18.5\% | 23.4\% |
| Gomchen/Laymonks | 362 | 25.0\% | 33.3\% | 25.2\% | 59.0\% | 62.5\% | 59.2\% | 53.0\% | 59.3\% | 53.2\% |
| Other | 15 | 1.7\% | 33.3\% | 2.5\% | 1.9\% | 8.3\% | 2.1\% | 1.8\% | 11.1\% | 2.2\% |

Among those aged 3-5 years, 224 persons completed pre-primary education and/or ECCD.

### 3.4 Attendance of Traditional Learning ${ }^{4}$

Information on attendance of traditional learning were also collected for all population aged 6 years and above. Table 3.3 shows the distribution of population
attending traditional learning by sex and areas in Trashi Yangtse Dzongkhag. Out of 15,354 persons aged 6 years and above, only 680 persons are attending traditional learning. Of these, $21.2 \%$ are attending traditional learning in public monasteries and $23.4 \%$ in private monasteries, while $53.2 \%$ are Gomchen or Lay monks. About $83.0 \%$ of those attending traditional learning reside in rural areas.

[^2]
## Section 4: HEALTH

## Introduction

Health is an integral part of any human development and the need for timely and reliable health indicator data is crucial. The 2017 PHCB collected information on general health conditions from all members of the household. The Census collected information on fertility, mortality, and disability.

Questions on fertility were asked to women aged 15-49 years to collect information on age at first birth, number of children ever born (living and dead), and birth in the last 12 months.

Questions on the occurrence of death in the 12 months prior to the census reference day collected information on the age, sex, and cause of death including information to identify maternal death.

To understand and measure disability in Bhutan the Washington Group (WG) of questions which cover six functional domains of seeing, hearing, moving, cognition, self-care, and
communication, were adopted. The disability questions were asked to all members of the household irrespective of age.

### 4.1 Fertility

The mean age at first birth in Trashi Yangtse is 21 years. The mean age at first birth for urban areas is 22 years and 21 years for rural areas.

Child survival rate is defined as the number of children surviving or living expressed as a percentage of the number of children born in their lifetime to women aged 15-49 years. The child survival rate for Trashi Yangtse is 90.4.

Crude Birth Rate (CBR) is the number of live births in a year per 1,000 population. The CBR for Trashi Yangtse is 16.6; 22.3 for urban areas and 15.2 for rural areas. The CBR for Trashi Yangtse has reduced from 24.0 in 2005.

General Fertility Rate (GFR) is the number of births during a year per 1,000 women of reproductive age (15-49
years). The GFR for Trashi Yangtse is 69.2, a decline from 101.5 in 2005.

General Marital Fertility Rate (GMFR) is defined as the number of births during a year per 1,000 women of reproductive age (15-49 years) who are married or living together. The GMFR for Trashi Yangtse is 108.3, a substantial reduction from 165.3 in 2005.

Total Fertility Rate (TFR) is defined as the average number of children a woman would bear during her entire reproductive life, at the prevailing age-specific fertility rate. The TFR for Trashi Yangtse is 2.3 per woman based on the number of births in the 12 months before the Census. The TFR for the urban areas of the Dzongkhag is 2.7 and for the rural areas is 2.2 per woman. The TFR for Trashi Yangtse has reduced from 3.5 in 2005 to 2.3 in 2017.

### 4.2 Mortality

Crude Death Rate (CDR) is defined as the number of deaths in a year per 1,000 population. The CDR for Trashi Yangtse is 7.1, a decline from 9.2 in 2005. The CDR for the urban areas is 3.9 and for the rural areas is 7.9.

Infant Mortality Rate (IMR) is defined as the number of deaths of children below the age of one year per 1,000 live births in a year. The IMR for Trashi Yangtse is 10.4, a decrease from 30.5 in 2005.

Child Mortality Rate (CMR) is the number of deaths of children between 1-4 years per 1,000 live births in a year. The CMR for Trashi Yangtse is 10.4, which is a slight reduction from 11.7 in 2005.

Under Five Mortality Rate (U5MR) is defined as the number of deaths of children below 5 years per 1,000 live births in a year. The U5MR for Trashi Yangtse is 20.8, also a reduction from 42.3 in 2005.

### 4.3 Disability

The information on disability for the census is based on the Washington Group (WG) Short Set of questions designed to identify people with a disability by asking whether people have difficulty performing basic universal activities (walking, seeing, hearing, cognition, self-care, and communication).

The disability prevalence rate for 2017 in Trashi Yangtse according to the cut-off recommended by Washington Group is $3.5 \%$. The cut-off recommended by WG defines a person to be disabled if any one domain of seeing, hearing, walking, remembering, self-care and communication is coded 'Lot of Difficulty' or 'Cannot do at all.' The highest prevalence rate is in Yalang Gewog (7.9\%) and the lowest is in Trashi Yangtse Town with a prevalence rate of $1.7 \%$.

Table 4.1 Disability Prevalence Rate by Gewog/ Town, Trashi Yangtse 2017

| Gewog/Town | Male | Female | Both Sex |
| :--- | ---: | ---: | ---: |
| Trashi Yangtse Town | 1.1 | 2.2 | 1.7 |
| Duksum Town | 2.2 | 3.0 | 2.5 |
| Boomdeling | 2.4 | 3.1 | 2.8 |
| Jamkhar | 4.5 | 5.0 | 4.7 |
| Tongmajangsa | 3.9 | 6.6 | 5.3 |
| Yangtse | 3.2 | 3.7 | 3.5 |
| Ramjar | 1.6 | 3.7 | 2.6 |
| Khamdang | 2.3 | 3.2 | 2.7 |
| Toedtsho | 4.7 | 4.2 | 4.4 |
| Yalang | 7.4 | 8.5 | 7.9 |
| Total | 3.0 | 4.1 | 3.5 |

## Section 5: LABOUR AND EMPLOYMENT

## Introduction

Reliable statistics on labour force are crucial for the country for planning, monitoring, and evaluating economic growth and development. The 2017 PHCB collected information on employment for all persons aged 15 years and above.

This section presents information on working-age population, economically active, economically inactive, labour force participation rate, and unemployment rate.

### 5.1 Working-age Population, Economically Active and Inactive Population

Table 5.1 shows population aged 15 years and above by usual activity status in Trashi Yangtse Dzongkhag. Trashi Yangtse Dzongkhag has 11,718 persons within the working-age population ( 15 years and above): 5,943 are males; and 5,775 are females. In urban areas, the working-age population makes up $21.6 \%$, and in rural areas, it is $78.4 \%$. Of the total working-age population, 8,181 persons (69.8\%) are economically active or in labour force. These are people who

Table 5.1 Population 15 Years and Over by Usual Activity Status, Trashi Yangtse 2017

| Usual Activity | Sex |  | Area |  | Total |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Male | Female | Urban | Rural |  |
| Economically Active | 4,452 | 3,729 | 1,205 | 6,976 | 8,181 |
| Economically Inactive | 1,491 | 2,046 | 1,330 | 2,207 | 3,537 |
| Both Active and Inactive | 5,943 | 5,775 | 2,535 | 9,183 | 11,718 |
|  | Percent |  |  |  |  |
| Economically Active | 74.9 | 64.6 | 47.5 | 76.0 | 69.8 |
| Economically Inactive | 25.1 | 35.4 | 52.5 | 24.0 | 30.2 |
| Both Active and Inactive | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 |

Table 5.2 Labour Force Rates, Trashi Yangtse 2017

| Measure | Urban |  |  | Rural |  |  | Bhutan |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Male | Female | Both Sex | Male | Female | Both Sex | Male | Female | Both Sex |
| Labour Force Participation Rate | 61.7 | 31.2 | 47.5 | 78.8 | 73.1 | 76.0 | 74.9 | 64.6 | 69.8 |
| Unemployment Rate | 2.6 | 3.8 | 3.0 | 0.9 | 1.0 | 0.9 | 1.2 | 1.2 | 1.2 |

were either working or indicated they were seeking and available for work. The rest of the working-age population, totaling 3,537 persons ( $30.2 \%$ ), are economically inactive typically because they are students, monks/nuns, aged people, housewives, retired, sick, or disabled and do not work to generate an income or help in a family business, or are seeking employment.

### 5.2. Labour Force Rate

The labour force participation rate is higher among the males than females, and in rural than in urban areas (Table 5.2). In both urban and rural areas, the labour force participation rate is higher for males than females. The overall unemployment rate is $1.2 \%$. In urban areas, unemployment rate for females ( $3.8 \%$ ) is higher than males ( $2.6 \%$ ), while in rural areas, unemployment rates between male and female is almost equal.

## Section 6: MIGRATION

## Introduction

Internal migration is defined as the change of residence from one geographical unit (place of origin) to the place of destination, crossing defined territorial boundaries or communities within a country. For this Report, level of geographical units will refer to Gewog/Town, which means that internal migration is the change in residence across Gewog/Town.

### 6.1 Concepts and Measures

Various parameters such as place of birth, duration of stay, place of previous residence, and place of residence five years ago are used to measure internal migration. These information have been collected in the 2017 PHCB though the Report will limit its analyses to the 'place of birth'. The measure of internal migration with the use of place of birth is also referred to as lifetime migration and the individuals making the move as lifetime migrants. In the present context, a lifetime migrant is defined as a person
whose Gewog/Town of residence on the census reference day differs from the Gewog/Town of birth. The other definitions used in this chapter are as follows:

An in-migrant: a person who enters a geographical area, crossing its boundary from a place outside it within the same country.

An out-migrant: a person who leaves a geographical area, crossing its boundary to another place outside it within the same country.

Place of Enumeration: is the place where an individual is found and enumerated on the census reference day.

Place of Birth: is the place of the mother's usual residence at the time of his/her birth. If the person was born outside Bhutan, the name of the country is taken as the person's birthplace. Migrants and non-migrants are classified based on the place of birth.

Net-migrant: is the difference between in-migration and out-migration. It can be positive or negative.

### 6.2 Lifetime Migration

A total of 5,102 persons are lifetime migrants in Trashi Yangtse, which means that they have moved from their Gewog/Town of birth and are currently residing in Trashi Yangtse. Out of these migrants, 3,195 persons are from other

Dzongkhags/Thromdes. A total of 11,971 persons have migrated out of Trashi Yangtse to other Dzongkhags/Thromdes.

For Trashi Yangtse, the percent of urban to urban migrants is $2.7 \%$, urban to rural migrants is $2.6 \%$, rural to urban migrants is $12.1 \%$, and rural to rural migrants is $12.8 \%$.

## Section 7: HOUSING, HOUSEHOLD AMENITIES, AND FOOD SUFFICIENCY

## Introduction

Housing is one of the basic needs of human life. The conditions of housing units determine the quality of life of the population. Housing amenities such as access to improved drinking water, energy sources, and other services are directly associated with a household's welfare or standard of living.

This section presents results of the 2017 PHCB for Trashi Yangtse Dzongkhag in relation to household size; housing conditions including number of rooms, construction materials for exterior walls, roofing, flooring material, and sanitation facilities; housing amenities such as water supply and energy sources; access to road and other services like communications and technology;
ownership of assets; and availing of health facilities.

The section is divided into six parts: household size; housing conditions; housing amenities; ownership of household assets and communication/media facilities; access to road-head and usage of health facilities; and food sufficiency.

### 7.1 Household Size

There are 3,982 regular households in Trashi Yangtse Dzongkhag as of 2017. This is a slight increase (5.8\%) from 3,764 regular households in 2005. Khamdang Gewog has the largest number of households, while Duksum Town has the smallest.

The average household size ${ }^{5}$ in the Dzongkhag has reduced to 3.7 persons

[^3]Figure 7.1 Mean Household Size by Gewog/Town, Trashi Yangtse 2017

from 4.3 persons in 2005. The average household size is the ratio of the total population in regular households to the number of regular households in an area. Figure 7.1 shows the mean size of regular households by Gewog/Town. The mean household size is the highest in Yangtse Gewog with 4.2 persons per household while the lowest is recorded in Duksum Town with 3.1 persons.

### 7.2 Housing Conditions

Information collected on the housing conditions during the Census include ownership of the housing unit, number of rooms, type of toilet facility, and the main materials of walls, roofs, and floors.

More than seven in ten of the
households in Trashi Yangtse Dzongkhag own their housing units. In rural areas, 83.7\% of households reside in their own housing units, $12.3 \%$ are tenants, while the rest live in rent-free private or government houses and other tenancy arrangements. In contrast, in urban areas, only $27.0 \%$ of the households reside in their own housing units, more than one in two are tenants (63.3\%), while the rest live in housing provided free of rent by private, government, and other tenancy arrangements.

The Census collected information on the number of rooms in the dwellings, excluding toilets, kitchens, bathrooms, and balconies. The number of people sleeping in a room is a major determinant

Figure 7.2 Percent Distribution of Housing Units by Tenancy, Trashi Yangtse 2017

of crowding. The room density in Trashi Yangtse Dzongkhag is slightly lower in urban areas (1.1 persons per room) than in rural areas (1.4 persons per room)

The main toilet facility at the Dzongkhag level is a flush toilet with $48.8 \%$ of households reporting using this facility. More households in urban areas (79.8\%) than in rural areas (42.0\%) use flush toilets. Significantly, some $5.2 \%$ of households in the Dzongkhag do not have a toilet facility. This scenario is slightly higher in rural (6.0\%) than in urban areas (1.5\%).

Some $64.6 \%$ of households have toilet facilities that were either a flush toilet, ventilated improved pit (VIP), pit latrine with a slab, or composting toilet. These are classified as improved toilet

Table 7.1 Room Density (person per room) by Area, Trashi Yangtse 2017

|  | Average <br> Number of <br> Rooms in <br> Dwelling | Average <br> Household <br> Size | Room <br> Density <br> (Person Room) |  |
| ---: | ---: | ---: | ---: | ---: |
| Area | 3.3 | 3.8 | 1.1 | 719 |
| Urban | 2.6 | 3.6 | 1.4 | 3,263 |
| Rural | 2.7 | 3.7 | 1.4 | 3,982 |
| Both Areas |  |  |  |  |

facilities. The remaining households have flush toilet to somewhere else, pit latrine (without slab), long drop latrine, or no latrine facilities.

Trashi Yangtse Town reported the highest proportion of households with improved sanitation facilities at $89.5 \%$, while Khamdang Gewog recorded the lowest at 51.6\% (Figure 7.3). Some 1,408 households in the Dzongkhag lacked access to improved sanitation

Figure 7.3 Distribution of Households with Improved Sanitation Facilities by Gewog/Town, Trashi Yangtse 2017

Figure 7.4 Distribution of Households Without Improved Sanitation Facilities by Gewog/Town, Trashi Yangtse 2017

facilities in 2017. A much sharper focus on the disparities in access to sanitation among gewogs will allow for targeted
interventions. In absolute numbers, Khamdang Gewog had 348 households without access to improved sanitation

## 2017 POPULATION AND HOUSING CENSUS OF BHUTAN (PHCB)

Table 7.2 Distribution of Households by Wall, Roof and Floor Materials by Area, Trashi Yangtse 2017

| Area | Main Material for Wall |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Rammed Earth, Mud Blocks | Bamboo with Mud, Plywood, Cardboard, Wood Planks | Stone with Mud, Stone with Lime/ Cement | Cement/RCC Wall, Bricks, Cement Blocks | Cane/Palm/ Trunks/Bamboo, Other | Total |

facilities, while Duksum Town had only 36 households (Figure 7.4).

A significant proportion (78.7\%) of households have walls made of stone with mud and stone with lime/cement (Table 7.2). In rural areas, the proportion of such housing units is much higher (82.5\%) than in urban areas (61.3\%).

Most housing units have roofs made of metal sheets (94.6\%), followed by planks/shingles (3.9\%). Planks and shingles are the most common flooring materials (76.6\%), followed by tiles/ marbles, cement/concrete, and terrazzo (18.7\%).

### 7.3 Housing Amenities

The majority of the households in Trashi Yangtse Dzongkhag use electricity (97.6\%) for lighting though a few households still use kerosene ( $0.9 \%$ ) and solar energy ( $0.5 \%$ ) for the same purpose. There is a slight difference between urban (98.5\%) and rural areas (97.5\%) in the use of electricity for lighting. The proportion of households using solar energy and kerosene for lighting is slightly higher in rural areas (1.5\%) than in urban areas ( $0.9 \%$ ).

Most households in Trashi Yangtse Dzongkhag use electricity or LPG as the two main sources of energy for cooking. In urban areas, most households use electricity (98.8\%) in combination with LPG (94.6\%) while the usage of other sources of fuel is negligible. However, in rural areas, more than four in ten households (42.8\%) use firewood for cooking.

The main source of drinking water for most households in the Dzongkhag is piped water (inside the dwelling and outside the dwelling), accounting for $98.3 \%$ of the total households. In addition, $0.6 \%$ of households use protected well/ protected spring and rainwater. These
sources of drinking water are classified as improved and $98.9 \%$ of households in the Dzongkhag have access to these, which is higher than the figure for the same in 2005 (86.3\%). There are more households using piped water inside the dwelling in urban areas (65.8\%) than in rural areas (19.9\%). About 0.7\% of households in rural areas reported unprotected well/spring/rivers/streams/ lake/pond/dam as their main source of drinking water (Table 7.4).

Among the Gewogs/Towns, all households (100.0\%) in Duksum Town have access to improved sources of drinking water, while Jamkhar Gewog (96.7\%) has the lowest proportion (Figure 7.5).

Despite progress in access to improved drinking water sources, 1.1\% or some 45 households in the Dzongkhag still depend on unimproved drinking water sources. In absolute numbers, Khamdang Gewog had 12 households without access to improved drinking water sources, while Duksum Town had zero household without access (Figure 7.6).

About $75.0 \%$ of the housing units have a reliable water supply. Reliable water supply is defined as the availability

Figure 7.5 Distribution of Households with Access to Improved Sources of Drinking Water by Gewog/Town, Trashi Yangtse 2017

Figure 7.6 Distribution of Households without Access to Improved Sources of Drinking Water by Gewog/Town, Trashi Yangtse 2017

of water at least during the critical hours of the day (5AM-8AM, 11AM-2PM and 5PM-9PM) and enough for washing and cooking.

In 2017, a quarter (993) of the households lacked reliable water supply. In terms of absolute numbers, Khamdang Gewog had the highest number of households without reliable water supply with 412 households, while Duksum town had the lowest with 36 (Figure 7.7).

About $1.2 \%$ of households in the Dzongkhag still need to travel for at least 30 minutes to the nearest water source (Annex Table A7.11).

### 7.4 Ownership of Household Assets and Communication/ Media Facilities

Information was collected on the ownership of certain assets and communication/media facilities at the household level. Assets include land/ plot, house/building, livestock, business, vehicle (commercial), vehicle (non-commercial), fridge, washing machine, machinery, sofa, sewing machine, vacuum cleaner, rice cooker, jewelry, Direct to Home (DTH), wrist watch, bicycle, television/video, etc. For information on the ownership of household assets and communication/media facilities at the Dzongkhag level and by urban and rural areas refer Annex Tables A7.13-A7.15.

Figure 7.7 Distribution of Households Without Access to Reliable Sources of Drinking Water by Gewog/Town, Trashi Yangtse 2017

### 7.5 Access to Road-Head and Usage of Health Facilities

The majority (78.9\%) of households have access to the nearest road head in less than 30 minutes. This is a substantial improvement from 2005 (40.0\%). However, there are some households (0.2\%) in the Dzongkhag that still need to travel for more than six hours to reach the nearest road point (Figure 7.8).

The majority of households (88.5\%) in the Dzongkhag availed health services during the 12 months prior to the census
reference day. Among those that did not, $77.1 \%$ stated that they did not require health services, $14.0 \%$ stated that the health facilities were too far, and $3.9 \%$ reported of having no time.

### 7.6 Food Sufficiency

About $7.6 \%$ of households in the Dzongkhag reported to having experienced food insufficiency (not enough food to feed all household members) during the 12 months prior to the Census. The situation of food insufficiency among

Figure 7.8 Percent Distribution of Households by Time Taken to Reach the Nearest Road Head, Trashi Yangtse 2005 and 2017

Table 7.5 Distribution of Households Experiencing Food Insufficiency in the last 12 Months by Area, Trashi Yangtse 2017

|  | Experienced food insufficiency in the last $\mathbf{1 2}$ months |  |  |  |
| :---: | :---: | :---: | ---: | ---: |
| Area | Yes | No | Not Reported | Total |
| Urban | 3.2 | 96.8 | 0.0 | 719 |
| Rural | 8.6 | 91.4 | 0.0 | 3,263 |
| Both Areas | 7.6 | 92.4 | 0.0 | 3,982 |

Figure 7.9 Distribution of Households Experiencing Food Insufficiency in the last 12 months by Gewog/Town, Trashi Yangtse 2017

households is higher in rural areas (8.6\%) than in urban areas (3.2\%).

Households experiencing food insufficiency vary across the Dzongkhag. Of the 303 households (7.6\%) that have experienced food insufficiency, Khamdang Gewog had 97 households, while Duksum Town had only 1 household reporting food insufficiency (Figure 7.9).

## ANNEX 1: 2017 PHCB INDICATORS: DEFINITIONS, NUMERATORS, AND DENOMINATORS

| SI. <br> No. | Indicators | Definition | Numerator | Denominator |
| :---: | :---: | :---: | :---: | :---: |
| 1 | Sex Ratio | Number of males for every 100 females | Number of Males | Number of Females |
| 2 | Child Dependency Ratio | Refers to dependents of children aged 0 to 14 years as a percentage of population aged 15 to 64. | Number of persons 0 to 14 years | Number of persons 15 to 64 years |
| 3 | Old Age <br> Dependency Ratio | Refers to dependents of old age 65 years and above as a percentage of population aged 15 to 64. | Number of persons 65 years and above | Number of persons 15 to 64 years |
| 4 | Total Dependency Ratio | Sum of child dependency and old dependency. | Number of persons between 0 to 14 years and 65 years and above | Number of persons 15 to 64 years |
| 5 | Literacy Rate | The ratio of literate population aged 6 years and above to the total population of same age group expressed in percentage. | Population aged 6 years above who can read and write a short text in any language. | Total population aged 6 years and above. |
| 6 | Currently Attending School/institute | The ratio of persons aged 6 years and above who are currently attending school/ institute to the total population of same age group expressed in percentage. | Population aged 6 years above who are currently attending school/ institute. | Total population aged 6 years and above. |
| 7 | Previously <br> Attended School/ institute | The ratio of persons aged 6 years and above who had attended school/institute in the past to the total population of same age group expressed in percentage. | Population aged 6 years above who had attended school/ institute in the past. | Total population aged 6 years and above. |
| 8 | Never Attended School/institute | The ratio of persons aged 6 years and above who have never attended school/institute to the total population of same age group expressed in percentage. | Population aged 6 years above who have never attended school/ institute. | Total population aged 6 years and above. |
| 9 | Crude Birth Rate | Number of live births in a year per 1,000 population | Number of live births in a year | Total Population |

| SI. <br> No. | Indicators | Definition | Numerator | Denominator |
| :---: | :---: | :---: | :---: | :---: |
| 10 | General Fertility Rate | Number of births during a year per 1,000 women of reproductive age (15-49 years) | Number of live births in a year | Female Population (Ages 15-49) |
| 11 | General Marital Fertility Rate | Number of births during a year for every 1,000 women of reproductive age who are married or living together. | Number of live births in a year | Female Population (Ages 15-49) married or living together |
| 12 | Total Fertility Rate | Average number of children a woman would bear during her entire reproductive life, at the prevailing age-specific fertility rate. <br> $\Sigma$ (five-year age-specific birth rates for females aged 15 to 49) *5 |  |  |
| 13 | Disability Prevalence Rate | Any one domain/ question is coded a lot of difficulty or cannot do at all. |  |  |
| 14 | Crude Death Rate | The number of deaths in a year per 1,000 population | Total number of deaths. | Total population |
| 15 | Infant Mortality Rate | The number of deaths of children below the age one year per 1,000 live births in a year. | Total number of deaths of children below one year. | Total number of live births in a year. |
| 16 | Child Mortality Rate | The number of deaths of children between 1-4 years per 1,000 live births in a year. | Total number of deaths of children between 1-4 years. | Total number of live births in a year |
| 17 | Under Five Mortality Rate | The number of deaths of children below 5 years per 1,000 live births in a year. | Total number of deaths of children below 5 years. | Total number of live births in a year |
| 18 | Working-age Population | All persons aged 15 years and above are considered to be working-age population. It comprises of economically active (labour force) and inactive population. | Persons 15 years and above | Total Population |
| 19 | Economically Active (Labour Force) | All persons who are/ were employed or unemployed during the during the reference period of the census are referred to as economically active population. |  |  |

| SI. <br> No. | Indicators | Definition | Numerator | Denominator |
| :---: | :---: | :---: | :---: | :---: |
| 20 | Economically Inactive | Economically Inactive Population comprise of persons who were neither "employed" nor "unemployed" during the reference period. |  |  |
| 21 | Unemployment Rate | Unemployed persons comprises of persons above 15 years and above who during the reference period were without work, currently available for work and seeking work. It is calculated as a percentage by dividing the number of unemployed individuals by all individuals currently in the labor force. | Number of unemployed persons | Labour force |
| 22 | Labour Force <br> Participation Rate (LFPR) | LFPR is defined as the proportion of the working age population which is economically active or the labour force. | Economically active or labour force | Working-age population |
| 23 | Average Household Size | The ratio of the total population in regular households to the number of regular households in an area. | Total population in regular households in an area. | Number of regular households in an area. |
| 24 | Room Density | Persons per room. | Average household size. | Average number of rooms. |
| 25 | Improved Sanitation Facility | Proportion of households with improved sanitation facilities. | Number of households with flush toilet, ventilated improved pit (VIP), pit latrine with slab and composting toilet. | Total number of households. |
| 26 | Improved Sources of Drinking Water | Proportion of households with improved drinking water sources. | Number of households with pipe water inside the dwelling, pipe water outside the dwelling, protect well/spring and rainwater. | Total number of households. |
| 27 | Reliable Water Supply | Reliable water supply is defined as availability of water at least during the critical time (5AM8AM, 11AM-2PM and 5PM-9PM) adequate for washing and cooking. | Number of households with reliable water supply. | Total number of households. |
| 28 | Food Insufficiency | Not having food to feed all the household members during the last 12 months. | Number of households with food insufficiency. | Total number of households. |

| Both Areas |  |  |  |  |

[^0]:    1 Principles and Recommendations for Population and housing Censuses, Revision to: A General Outline* United Nations

[^1]:    2 The highest level of education completed refers to the completion of any grade within a particular education level.
    3 Grade 0 refers to pre-primary.

[^2]:    4 Traditional learning refers to monastic education in dratshang/shedra/drubdey/gomdey/patshala. Gomchen/Lay monks are also considered as attending traditional learning.

[^3]:    5 The average household size is calculated based on the members present in regular households as well as members absent and outside Bhutan. Those persons who were enumerated as visitors were also included. However, members who were canvassed in the institutions or were absent during census enumeration but were within Bhutan were excluded.
